

Driving Adoption Through Familiarity

How we repositioned PayZapp Wallet for the people already using PayZapp

Role	Focus	Duration
Team Lead	UX and strategy	Dec 2024 - Feb 2025

Zeta built PayZapp. HDFC Bank set priorities and approved changes.

**Zeta**

Designed and built the
product

**PayZapp**

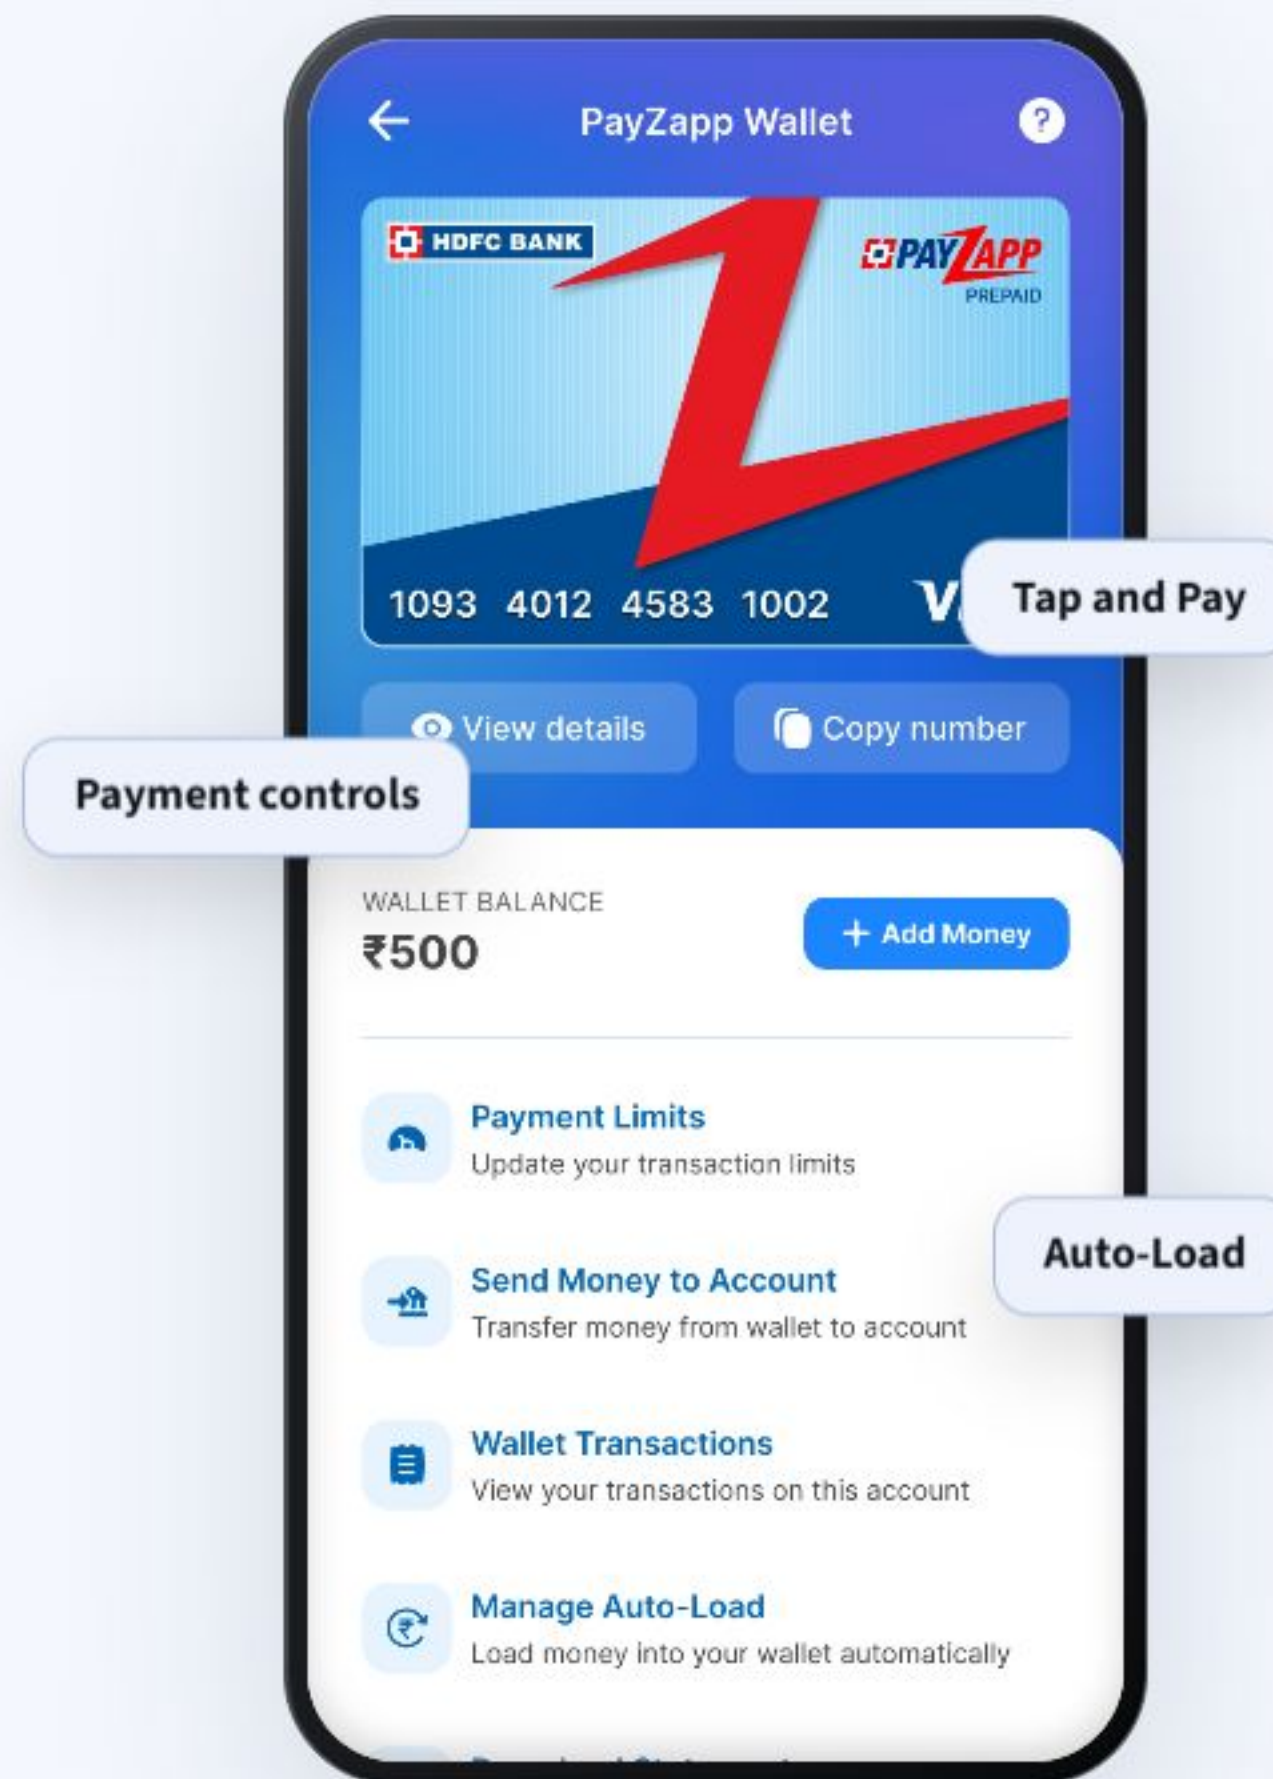

Co-led product

**The bank saw
an opportunity
in the prepaid
payments market.**

PayZapp Wallet already existed within PayZapp.

But it had struggled to find a clear place in the market.

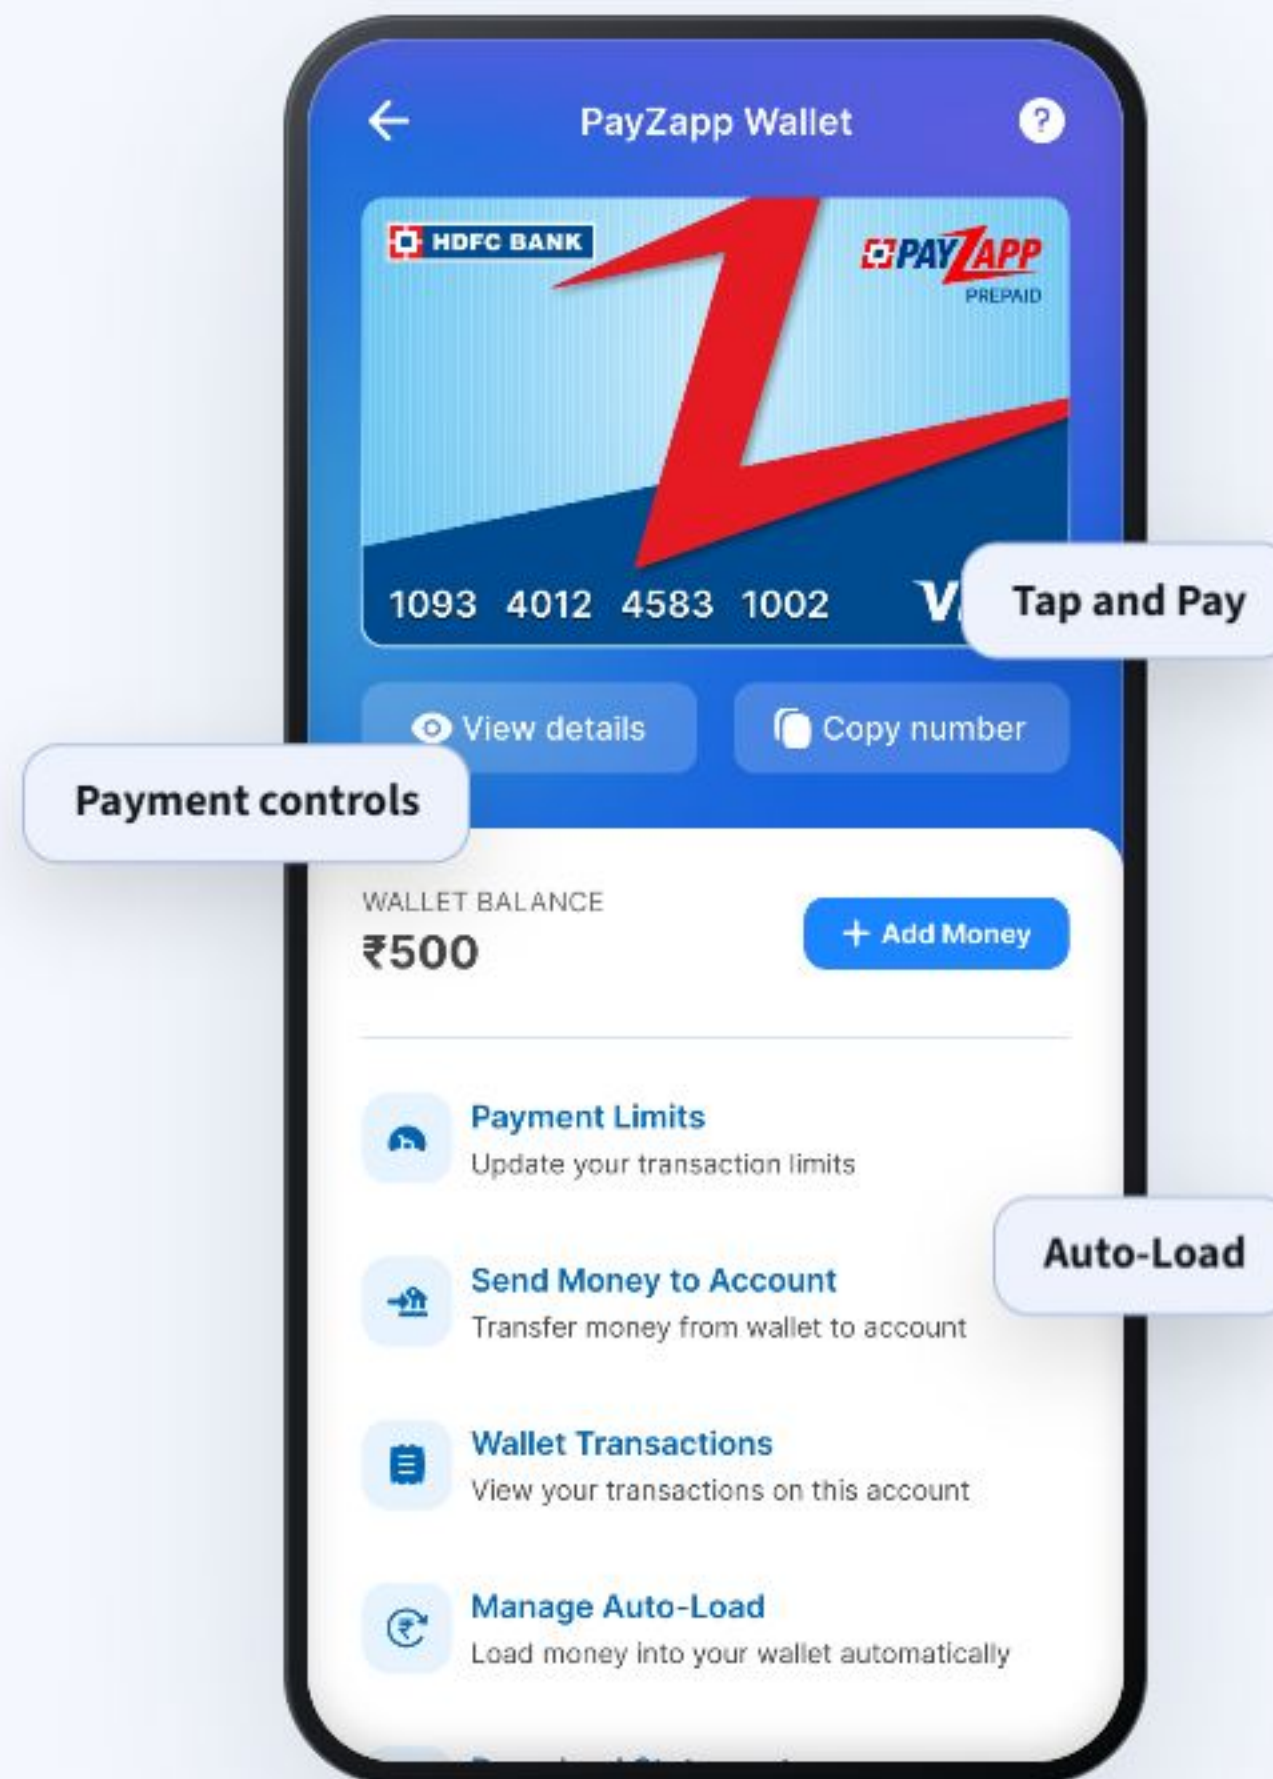

PayZapp Wallet already existed within PayZapp.

But it had struggled to find a clear place in the market.

So, the bank proposed a rebrand.

To give the wallet a clearer identity and purpose.

They wanted to call it **Zapp Account**

A payment account for all your daily
spends

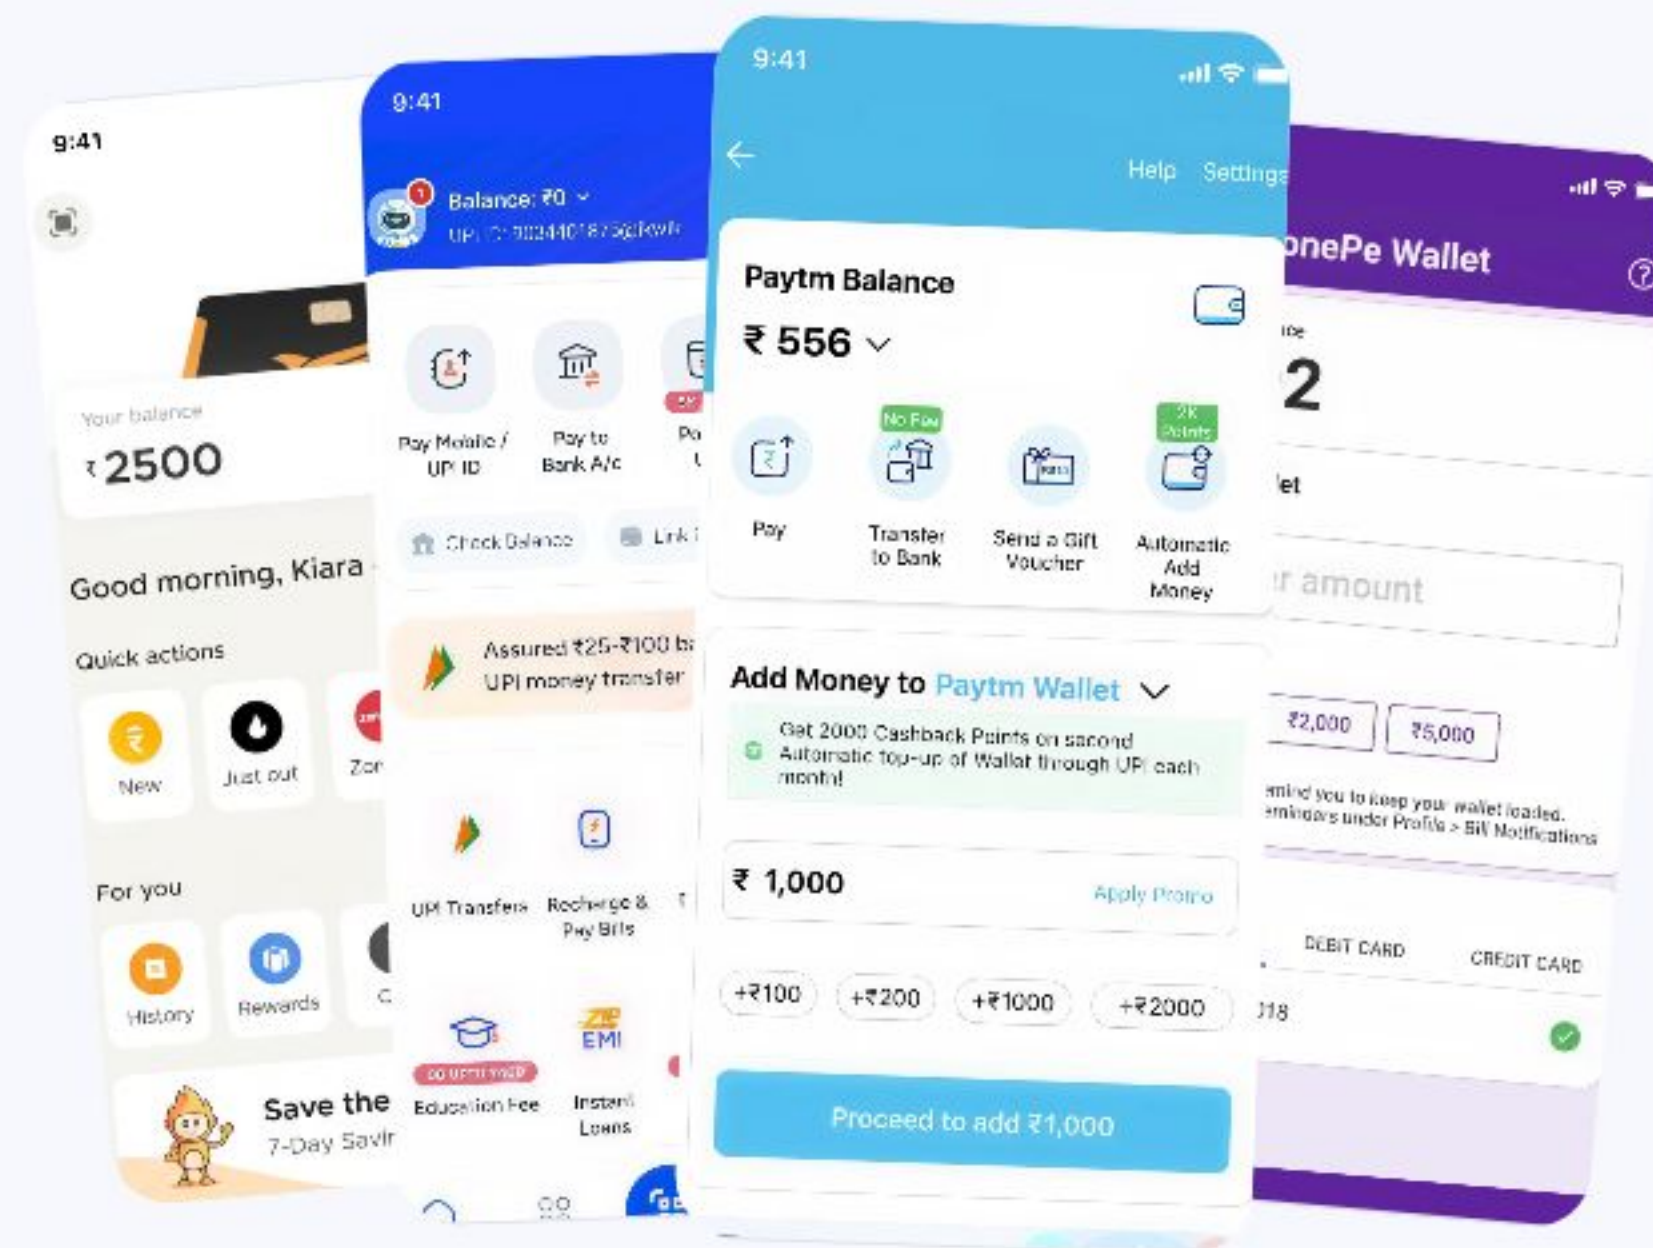

They wanted to call it
Zapp Account

**The bank saw it as a
calculated experiment
with strong potential.**

**And the strategy
was ours to define.**

**We looked at
our competitors**

We looked at
our competitors

**We interviewed
wallet users**

I don't really use Auto-Load.

I'm not sure what PayZapp Wallet
does.

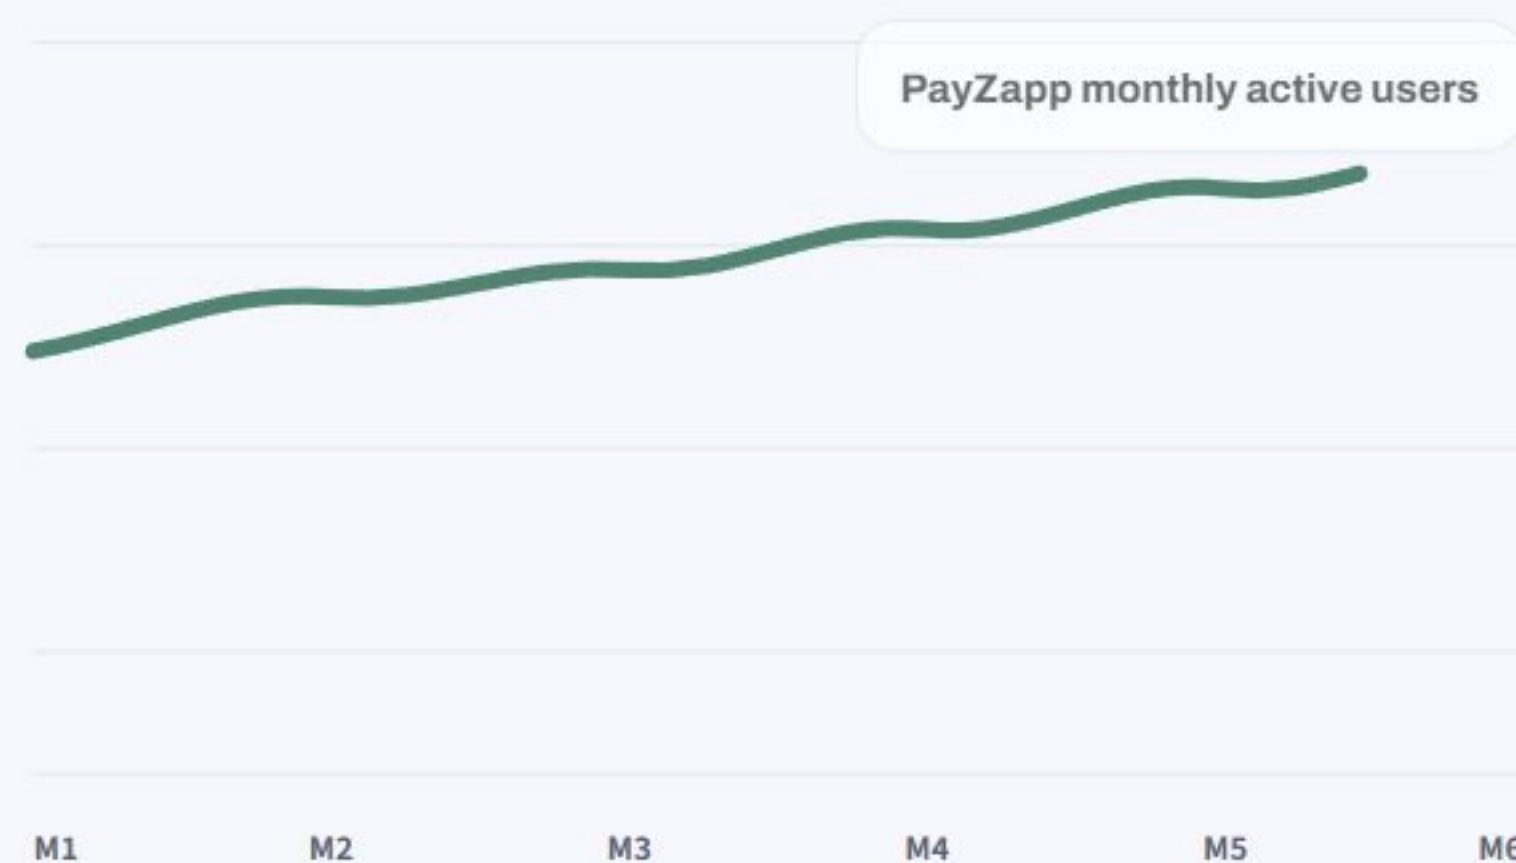

I only use it to redeem
Cashpoints.

I don't know what Swipe to Pay is.

We looked at
our competitors

We interviewed
wallet users

**But when we looked
at our own data**

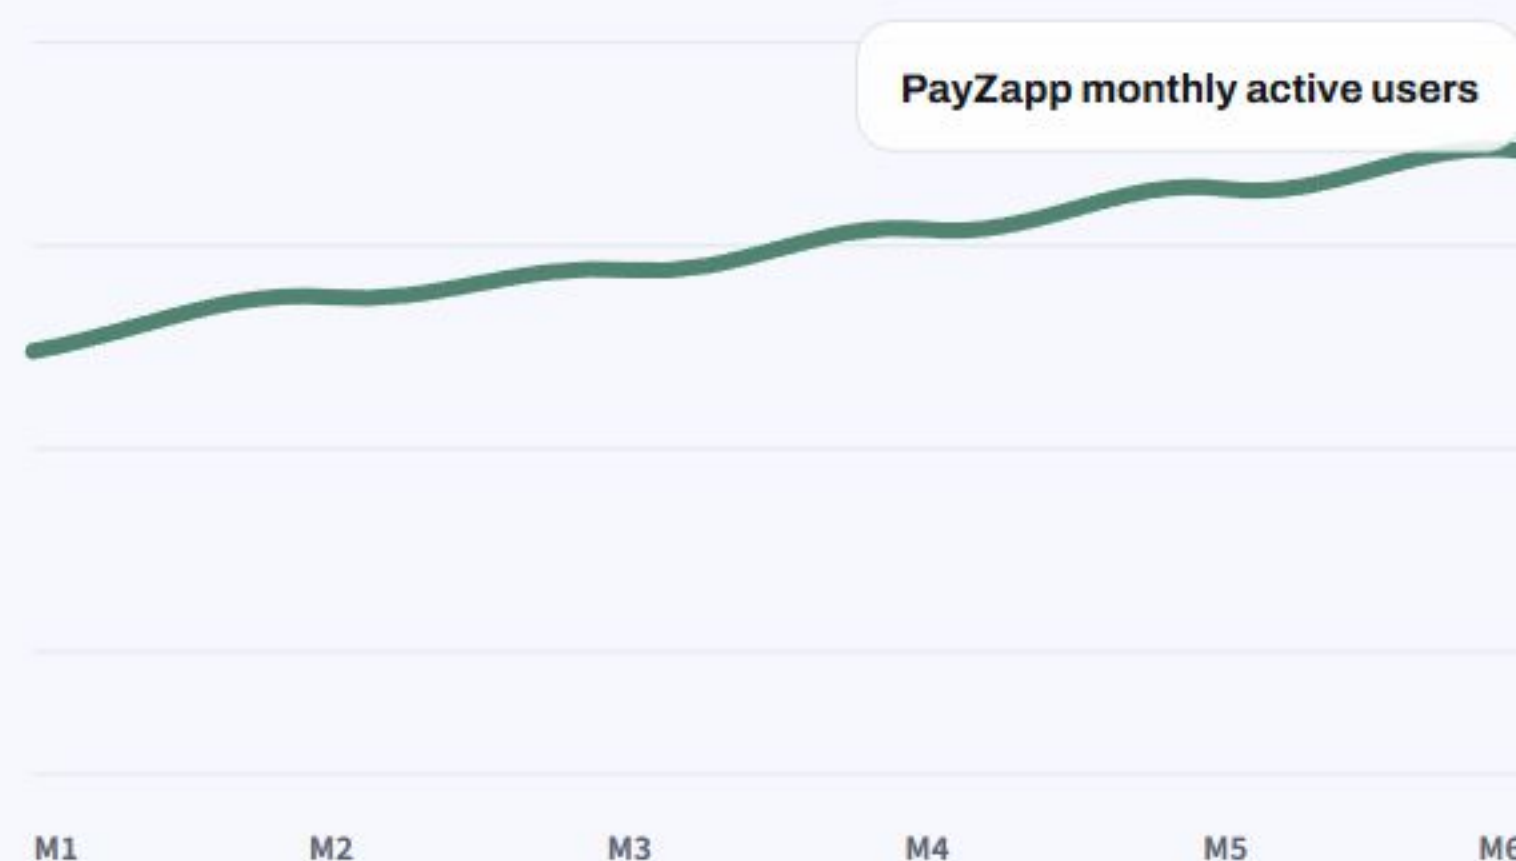

Directional visualization, not plotted values

We looked at
our competitors

We interviewed
wallet users

But when we looked
at our own data

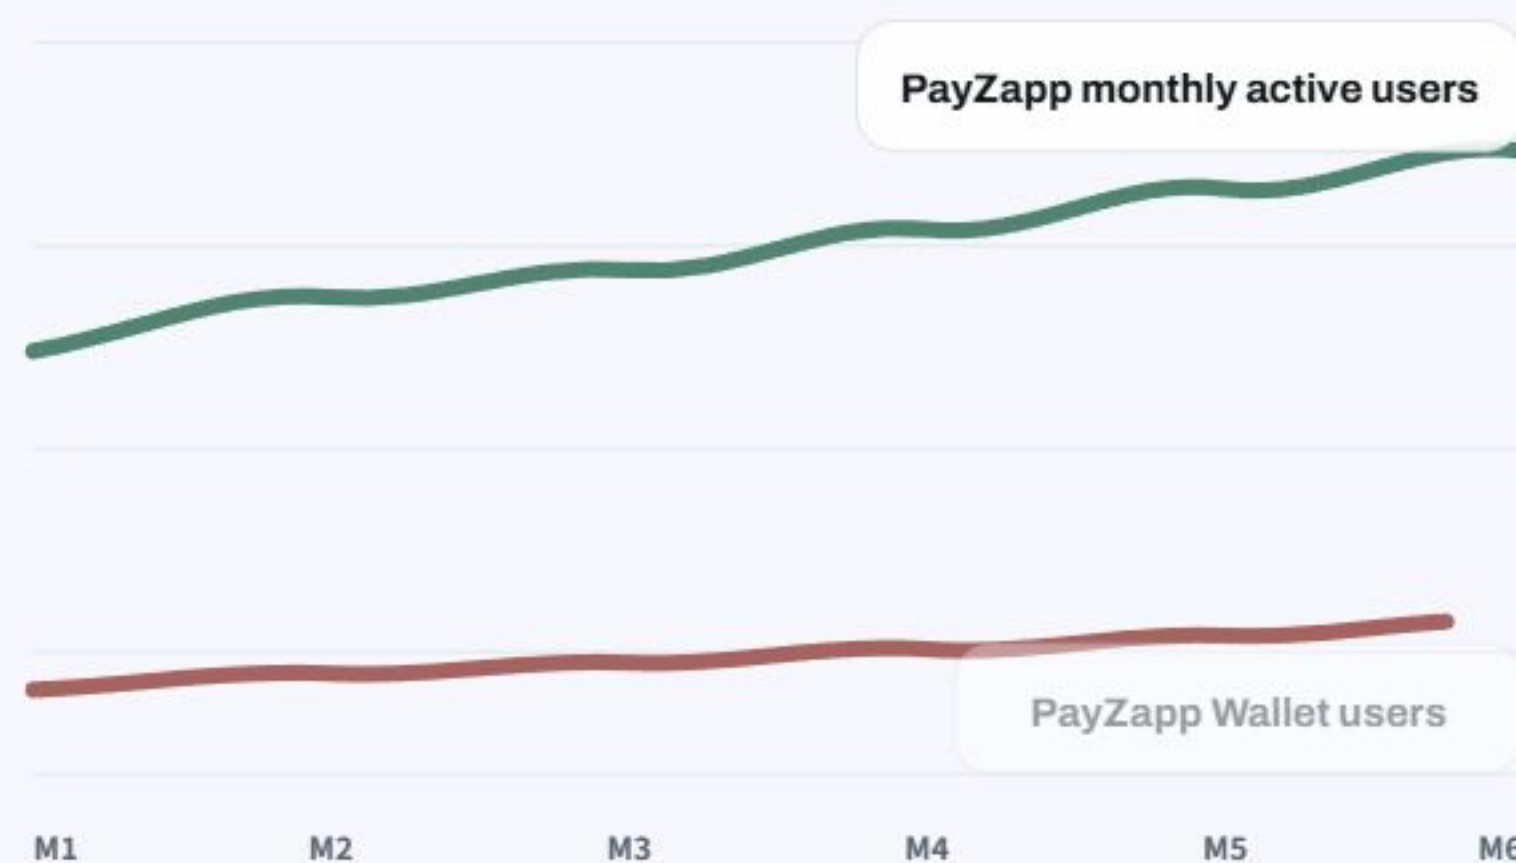

**The most obvious issue
got highlighted**

Directional visualization, not plotted values

The problem was adoption.

Despite PayZapp's healthy user base, adoption of PayZapp Wallet was very low.

Directional visualization, not plotted values

**This meant looking
at the people
already using PayZapp.**

This meant looking at the people already using PayZapp.

Our Core Persona

Most PayZapp users were salaried, aged 25–40, and based in Tier 2 and Tier 3 cities.

What interviews revealed

The wallet's value was unclear

Auto-Load and other capabilities went undiscovered

Wallet was a Cashpoints conversion tool

The bank was aligned.

For a strategic experiment, proving value with existing PayZapp users was the more credible first move.

Targeting a wider market

Longer discovery cycle

Fierce market competition

Larger delivery commitment

Adoption within PayZapp

Existing audience

Faster validation

Better fit for an experiment

**In measurable terms,
adoption meant:**

Adoption $\propto$ **Monthly spends** + **Monthly loads** + **Frequency of loads**

Our findings shaped these design directions

Lead with value

Lead with the value users would feel, not the feature terminology behind it.

Center loading money

Make loading money the core action of the Zapp Account experience.

Use contextual levers

Leverage familiar PayZapp contexts to educate users even reinforce value.

Let's look at the designs

We will follow the experience in this sequence.

- 01 **Entry points & onboarding**
- 02 **Limited capability Zapp Account**
- 03 **Full capability Zapp Account**

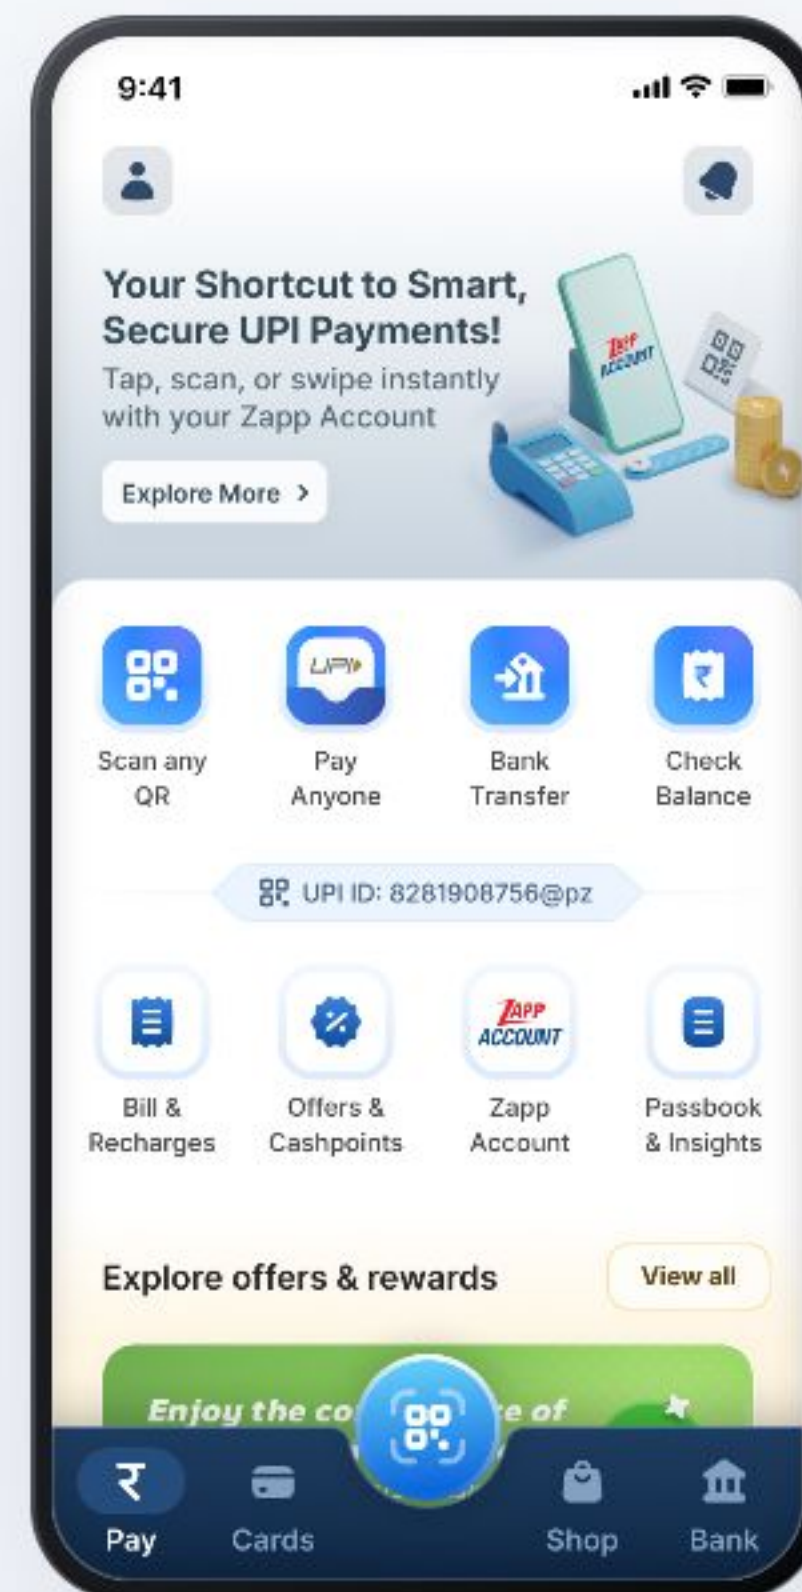

ENTRY POINTS & ONBOARDING

I knew what worked and what would stand out

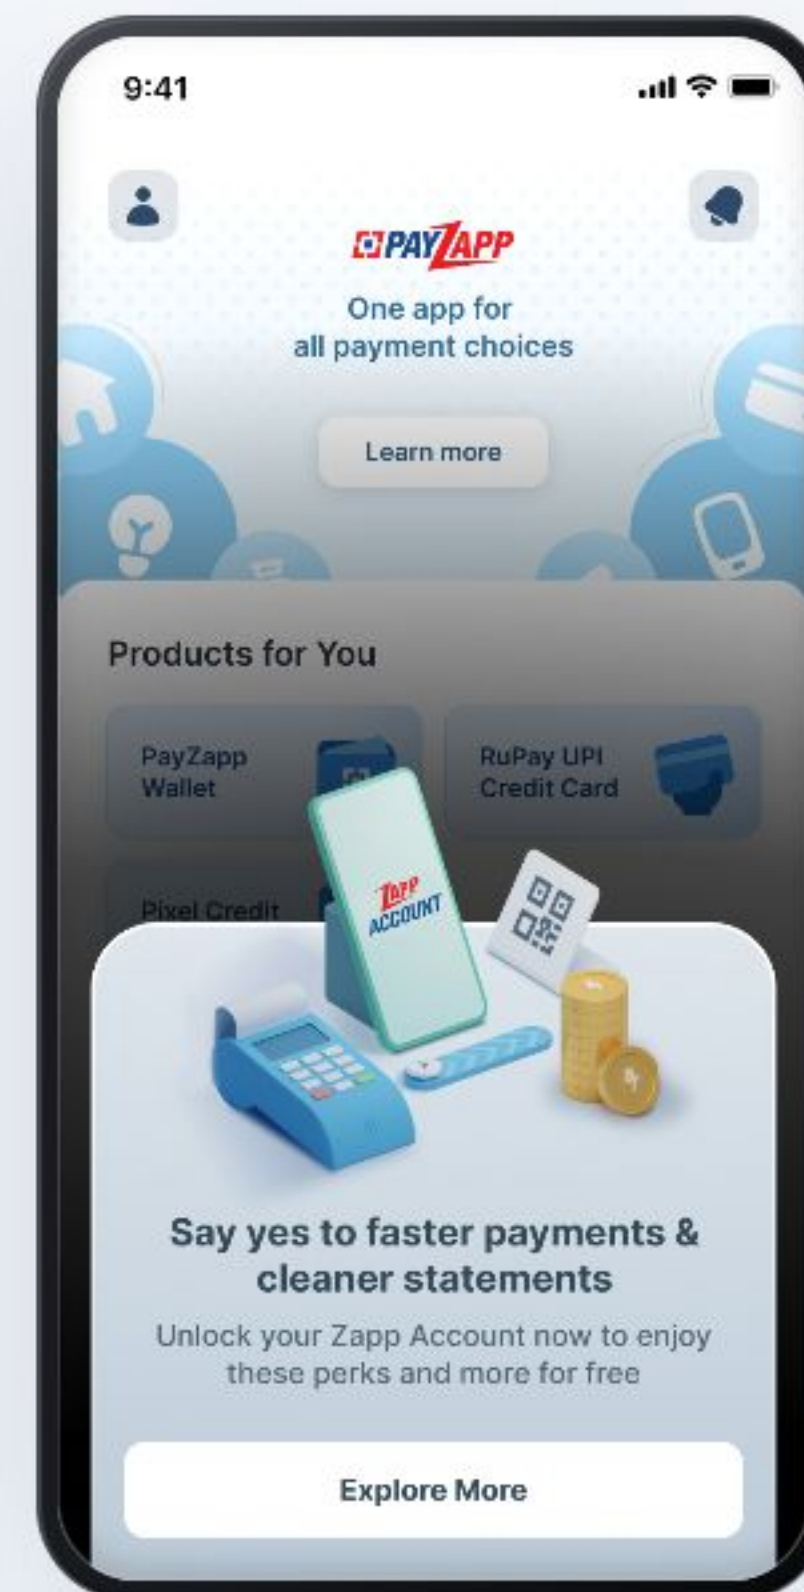

Value-led UX copy

One benefit at a time

Recognizable 3D illustrations

Spotlight banners

Benefit-led bottom sheets

ENTRY POINTS & ONBOARDING

The onboarding followed the same pattern

A simple carousel to introduce one value proposition at a time. It began with the benefit that brought the user in, then moved through the remaining benefits.

ZAPP ACCOUNT
For All Your Payments

Transfer money to any **bank account for free**

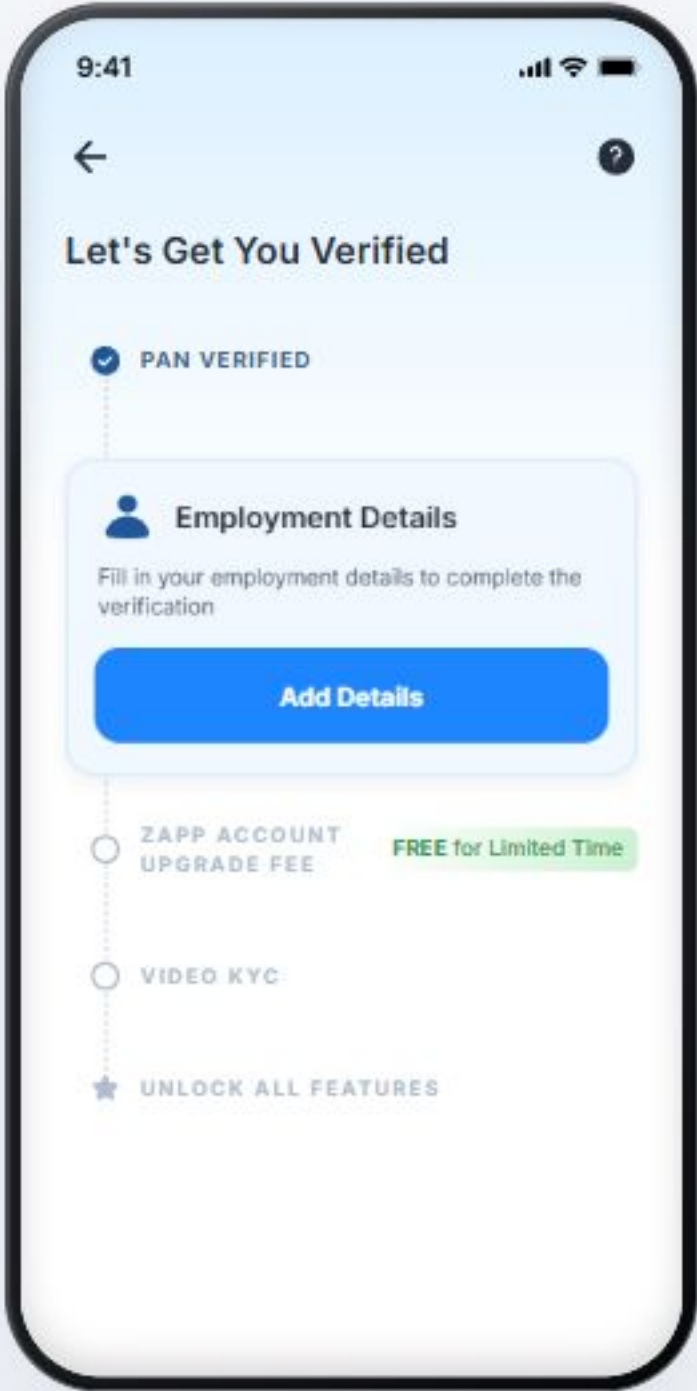

Get Zapp Account

 Takes a few minutes

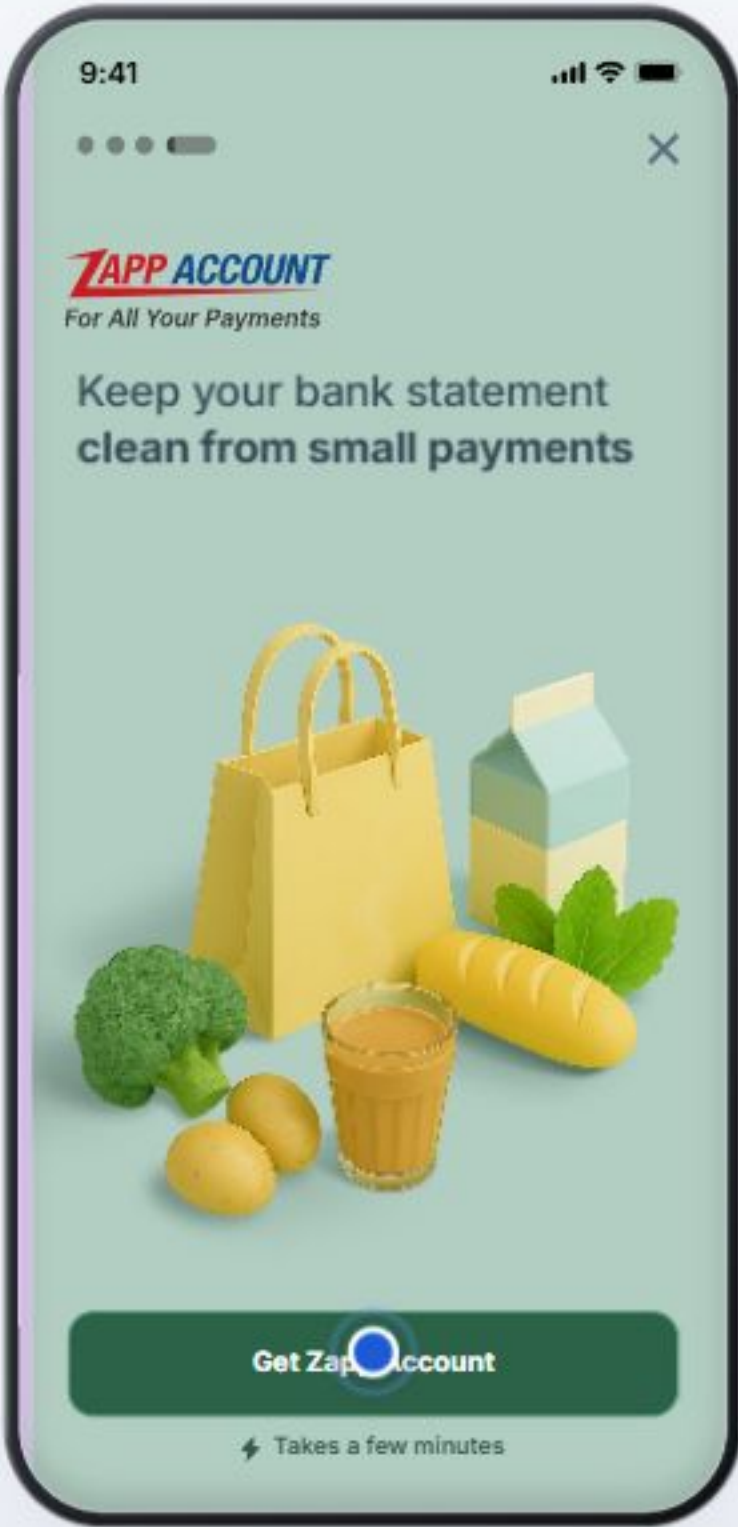

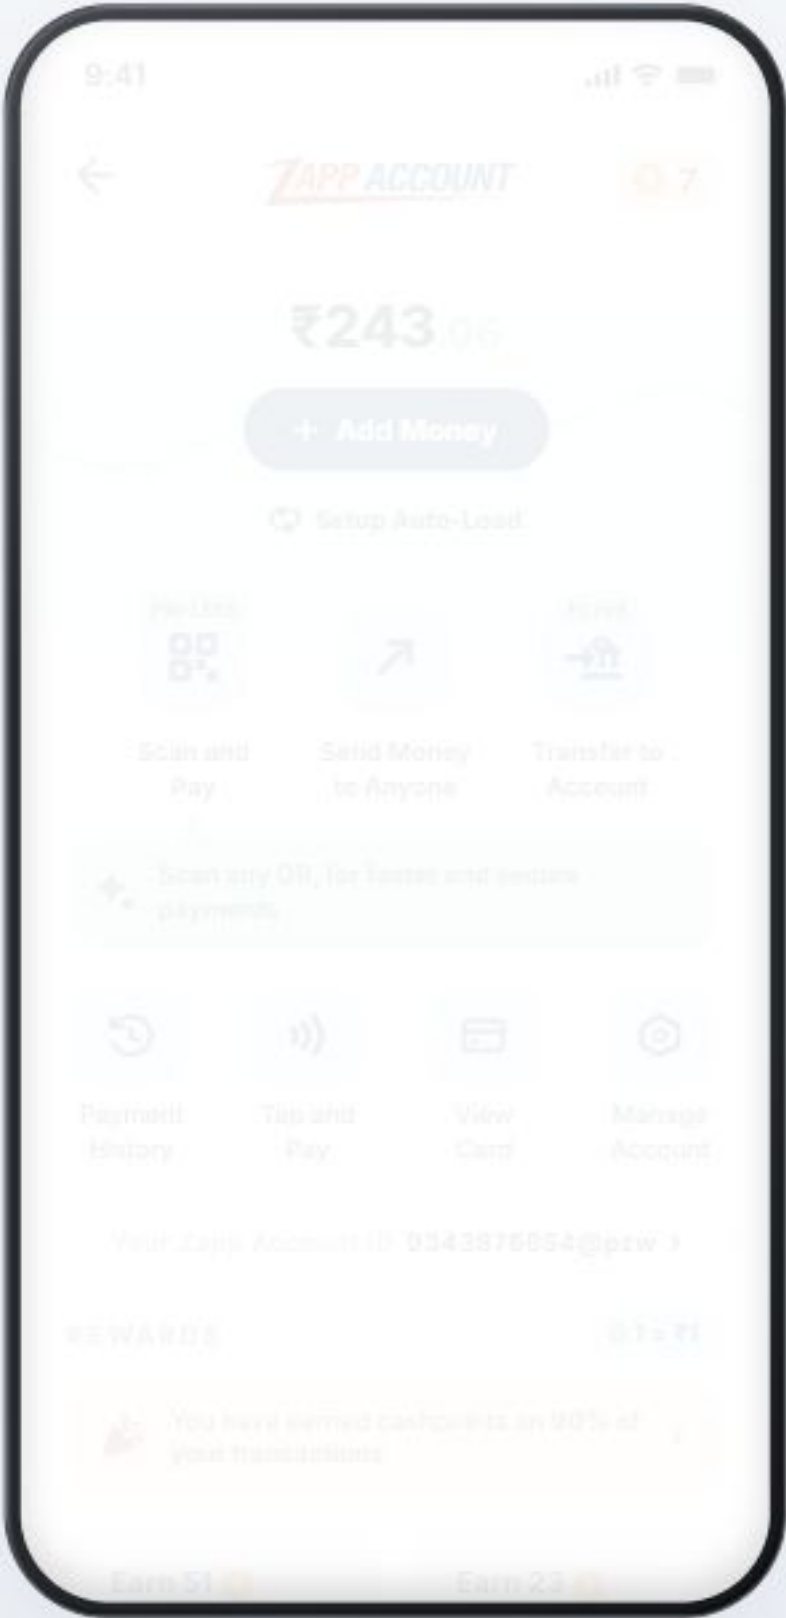

4-digit card verification

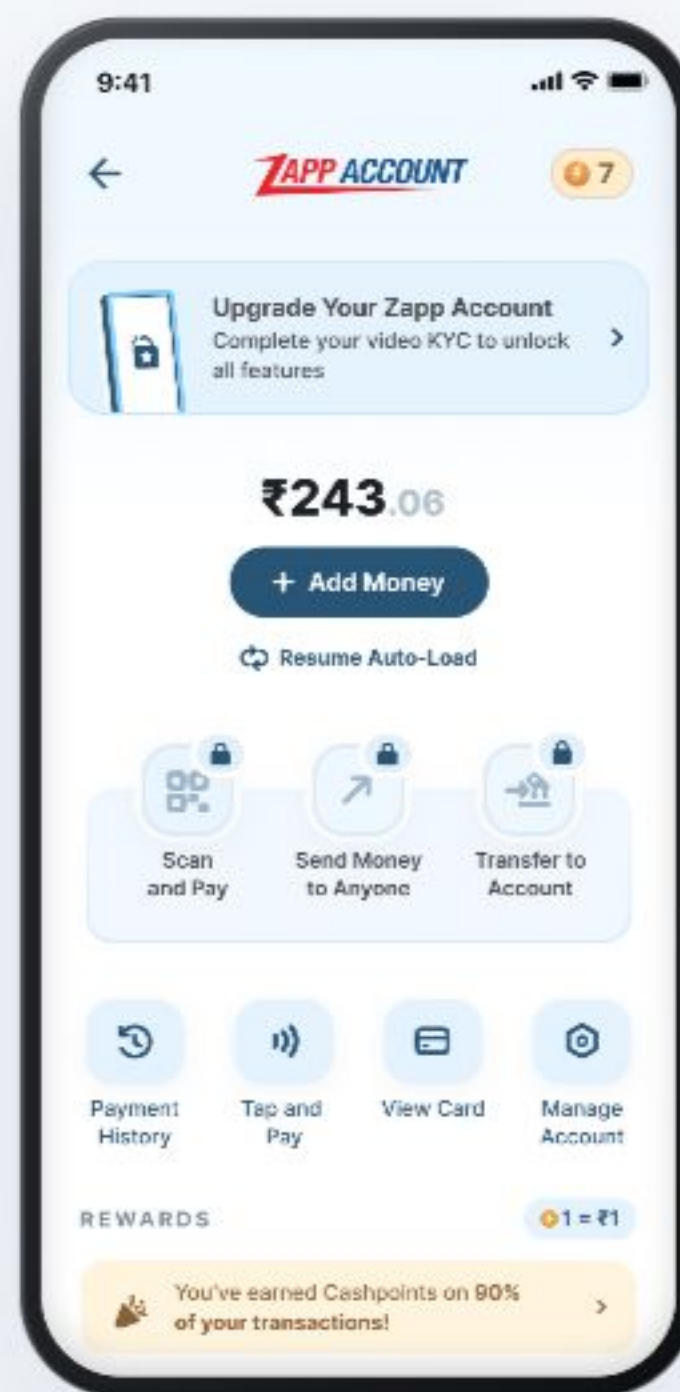

Guided Video KYC

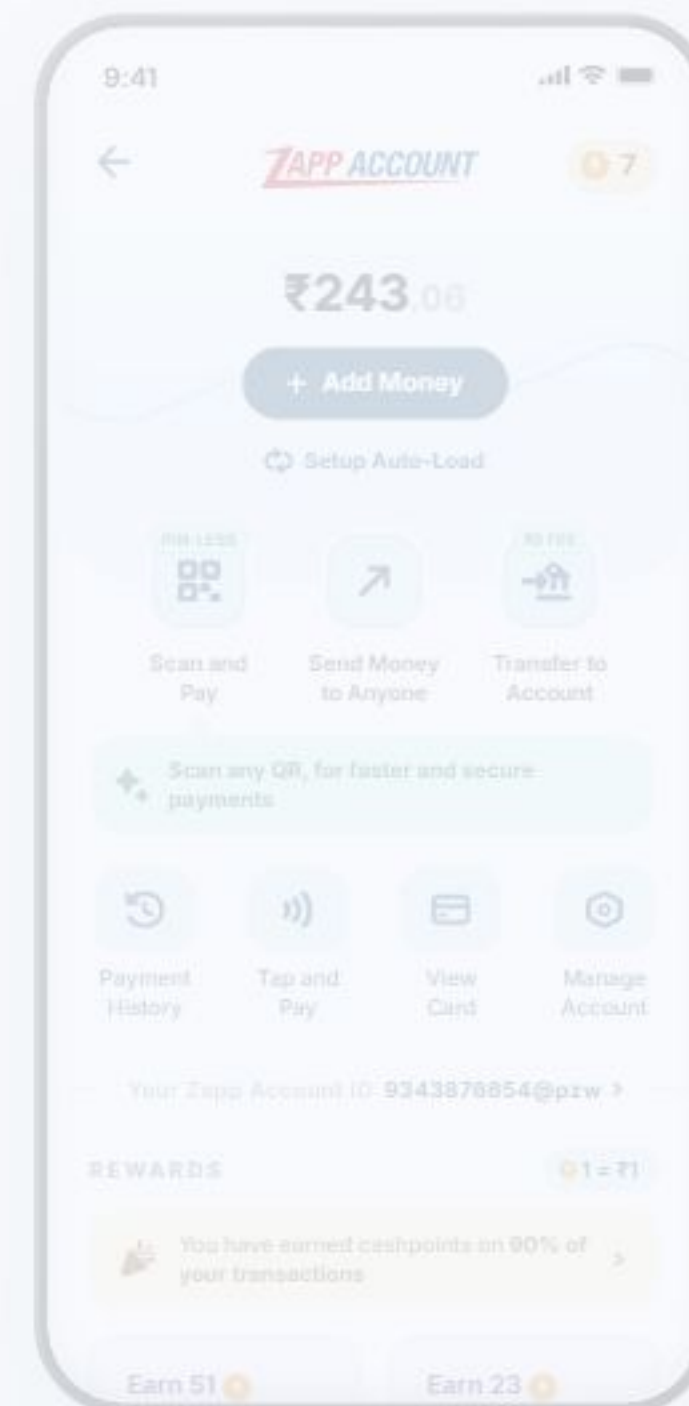

**Most users
started with
limited capabilities**

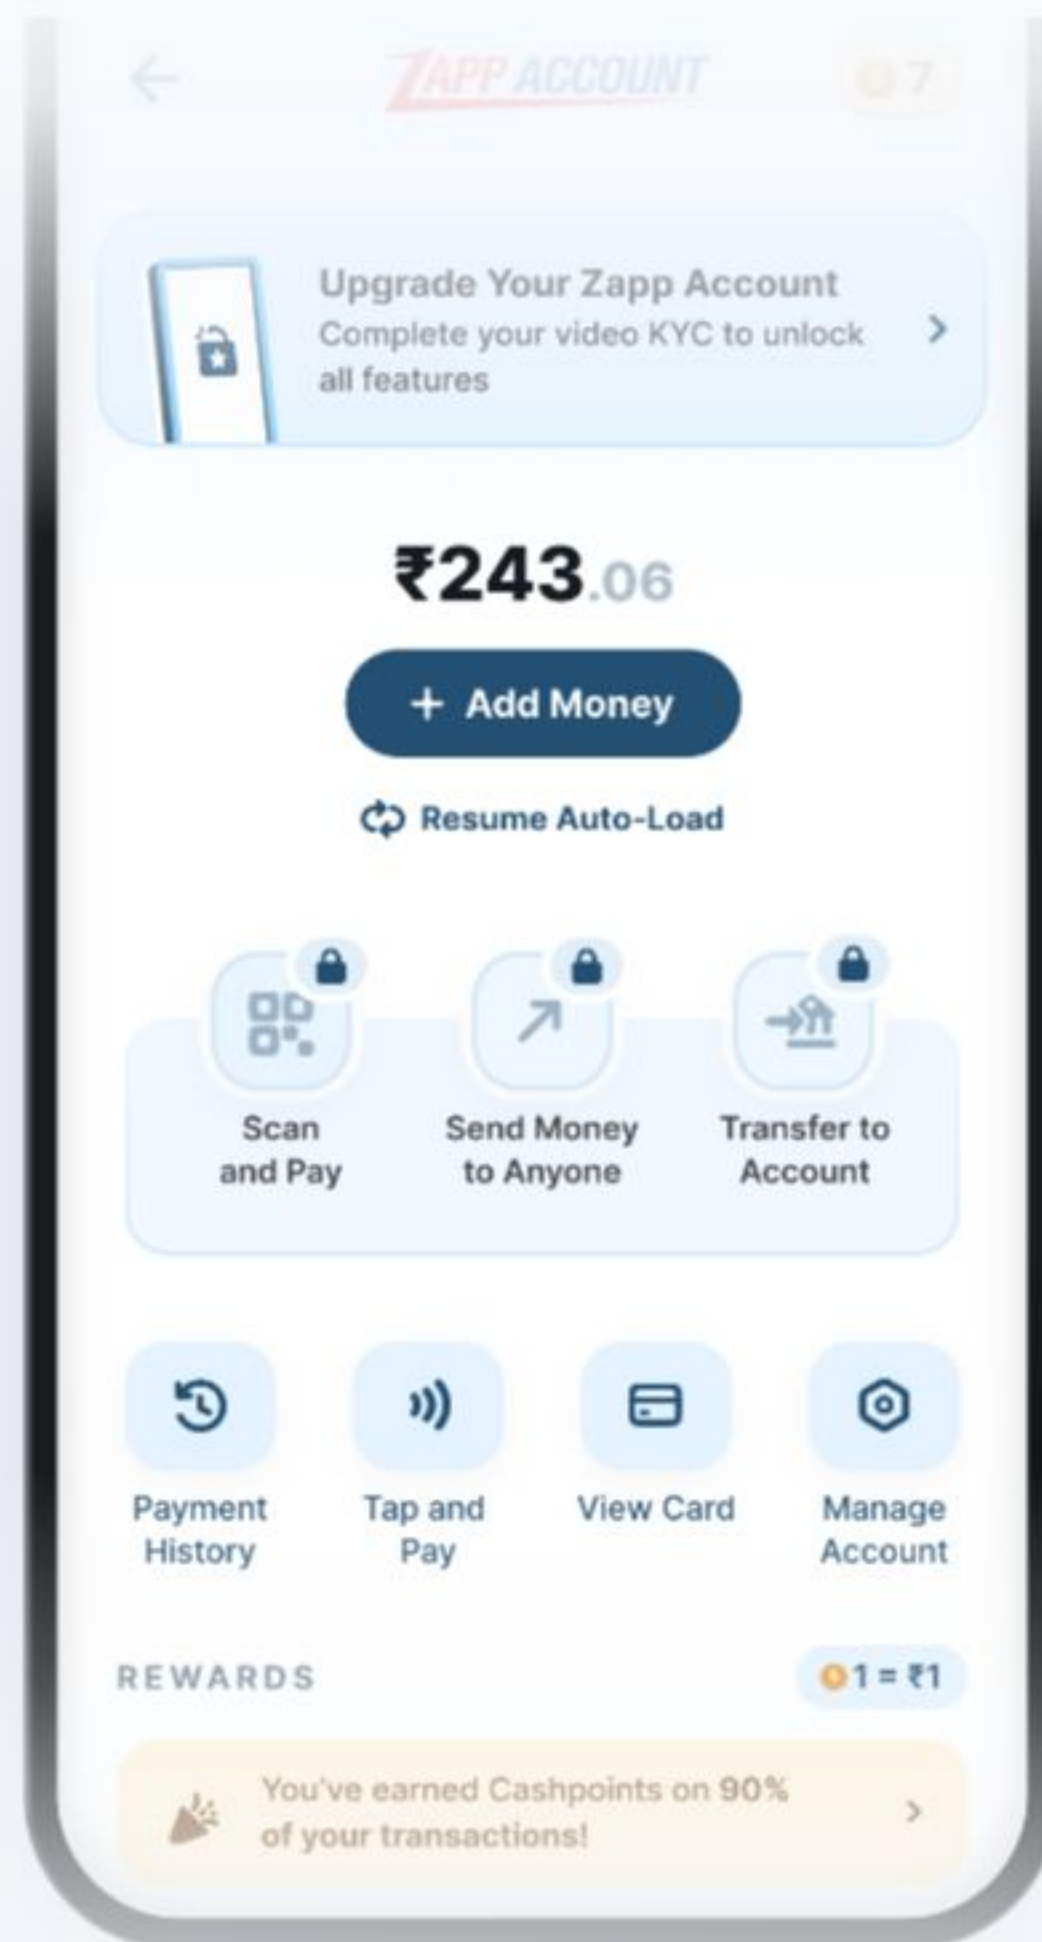

Limited capability

Full capability

Limited Zapp Accounts lacked key capabilities

- ✗ Scan and Pay for UPI transactions
- ✗ Send money to other people
- ✗ Transfer money to a bank account

Locked actions became upgrade opportunities

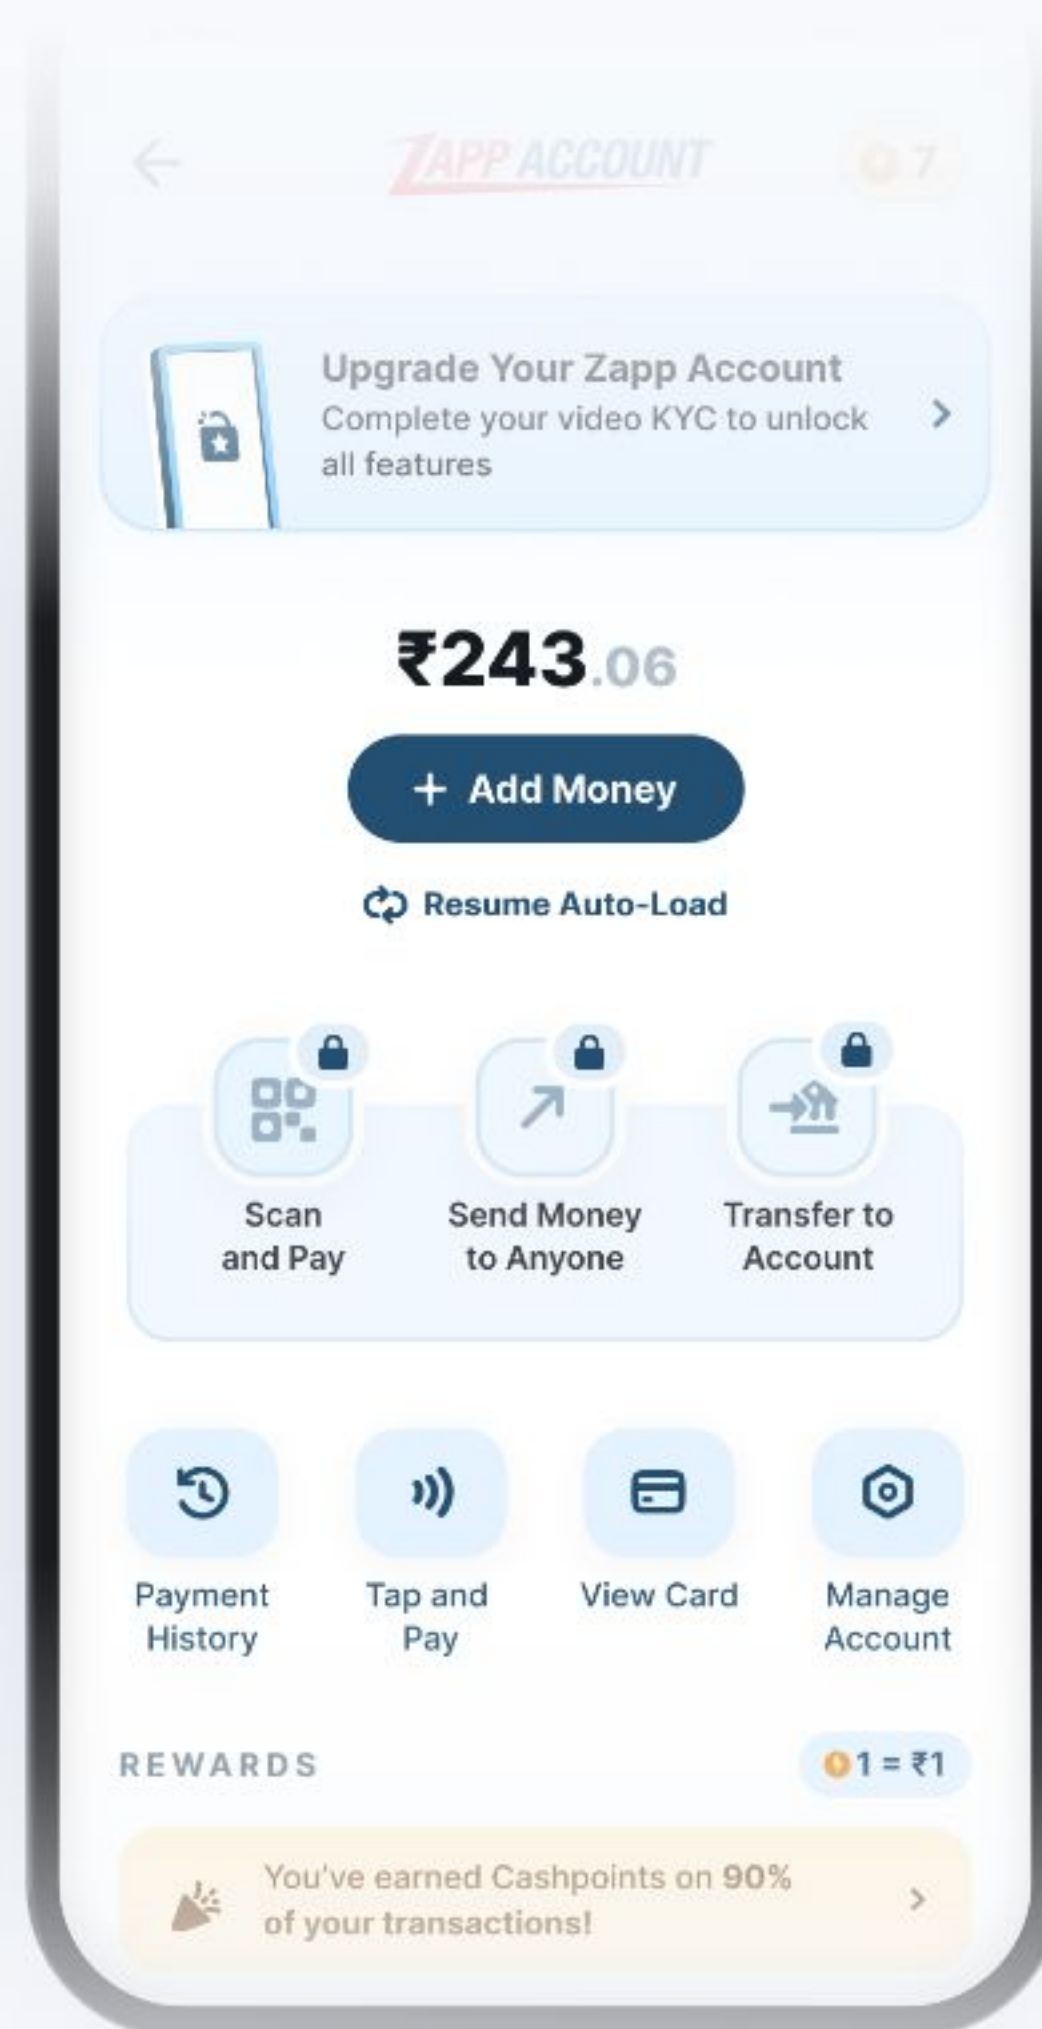

Scan and Pay for UPI transactions

Send money to other people

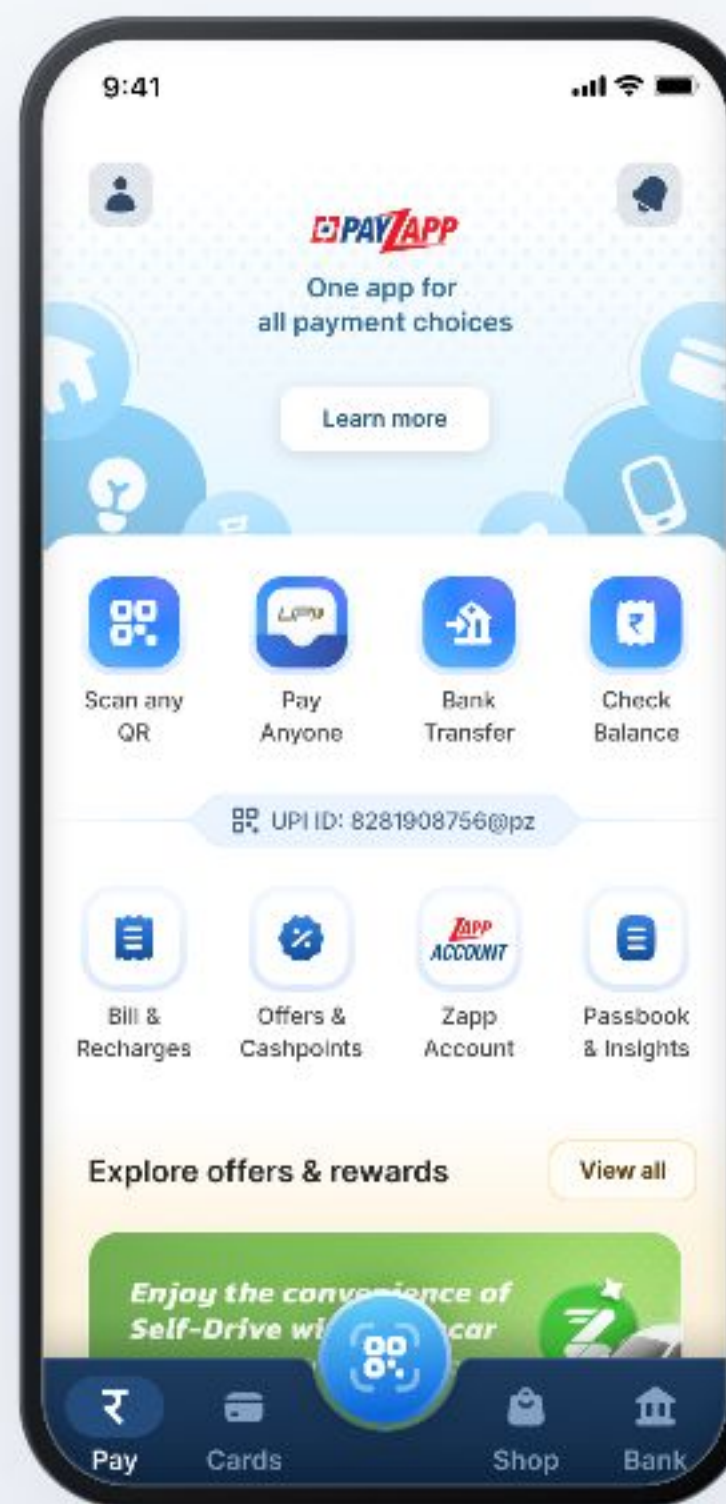

Transfer money to a bank account

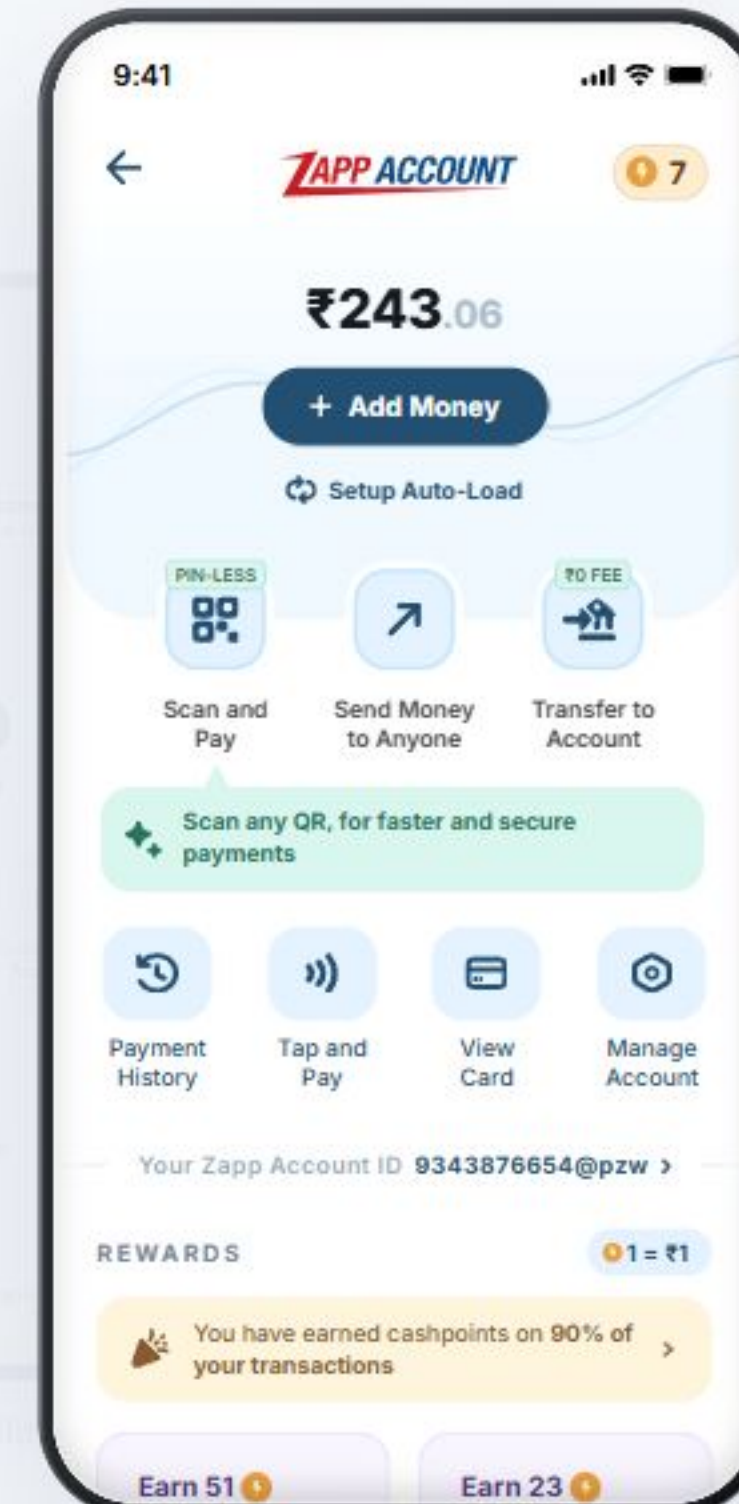

Familiarity by design worked in our favor

We preserved the structure existing PayZapp users already understood.

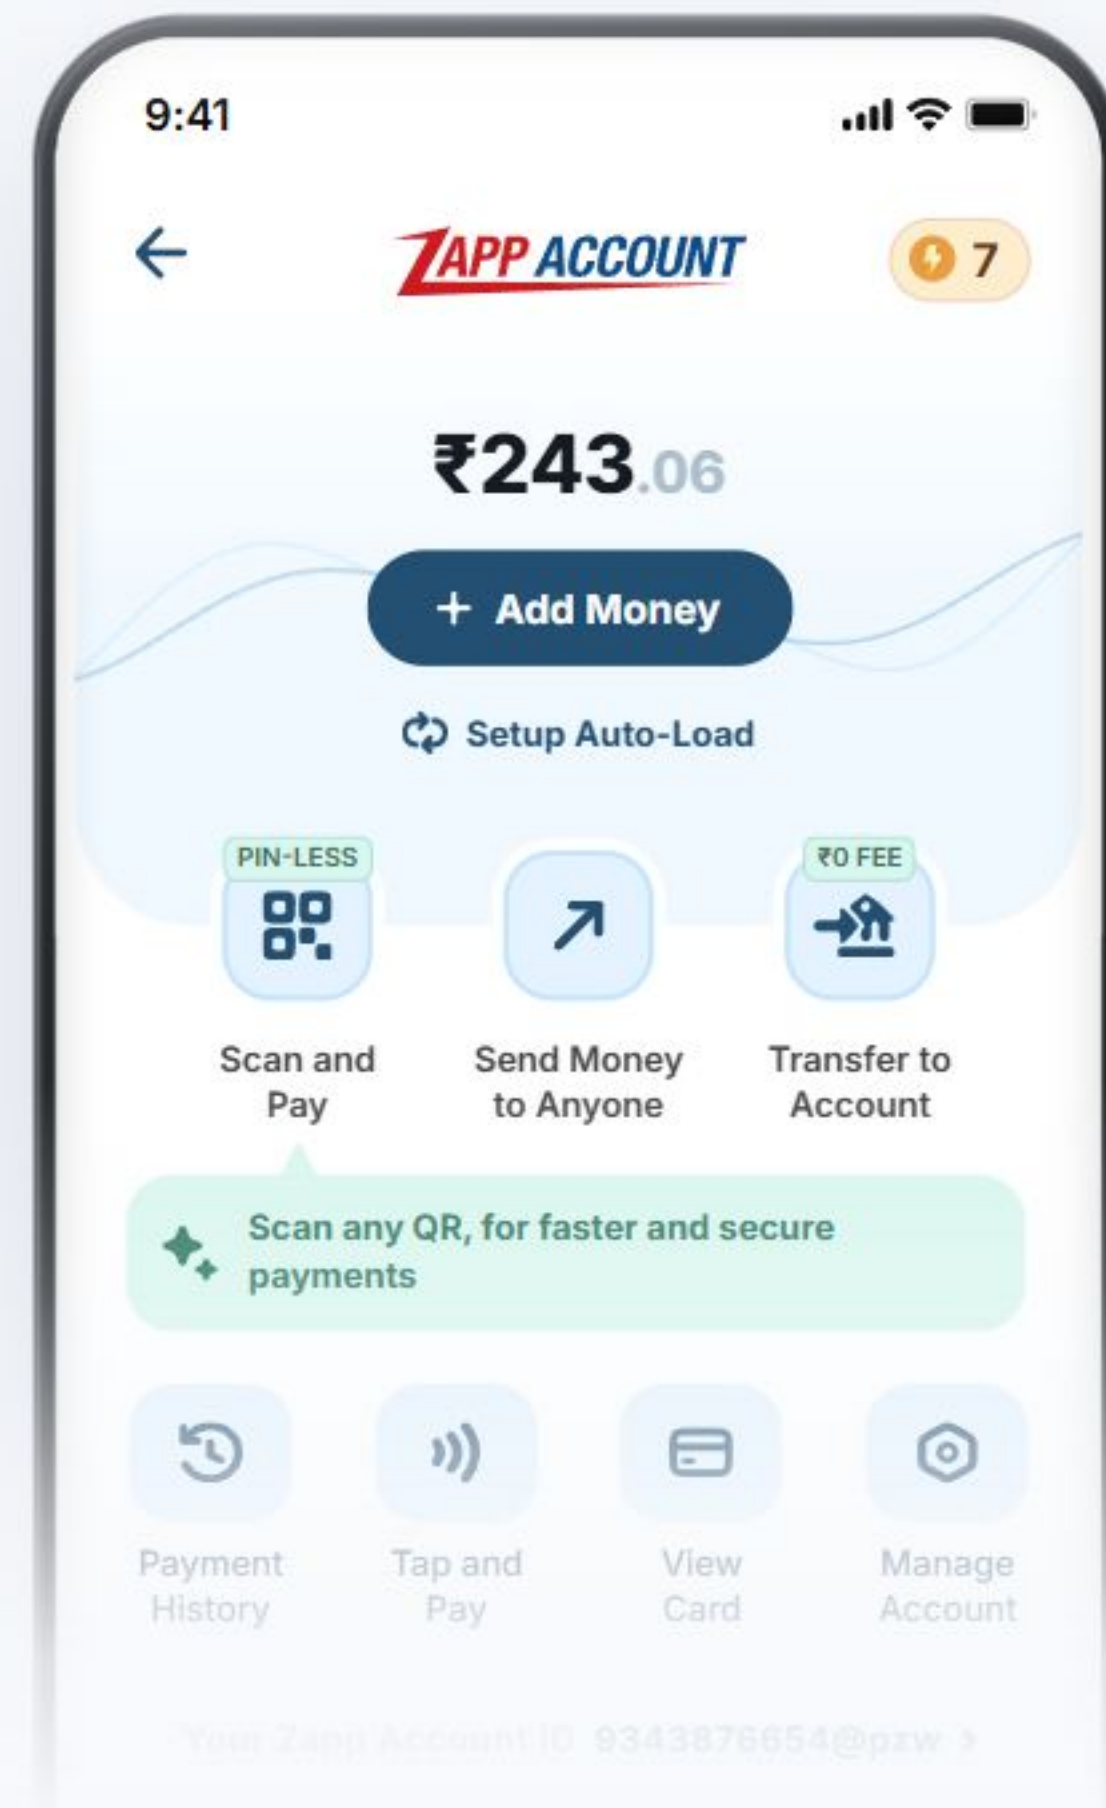

PayZapp home

Full capability

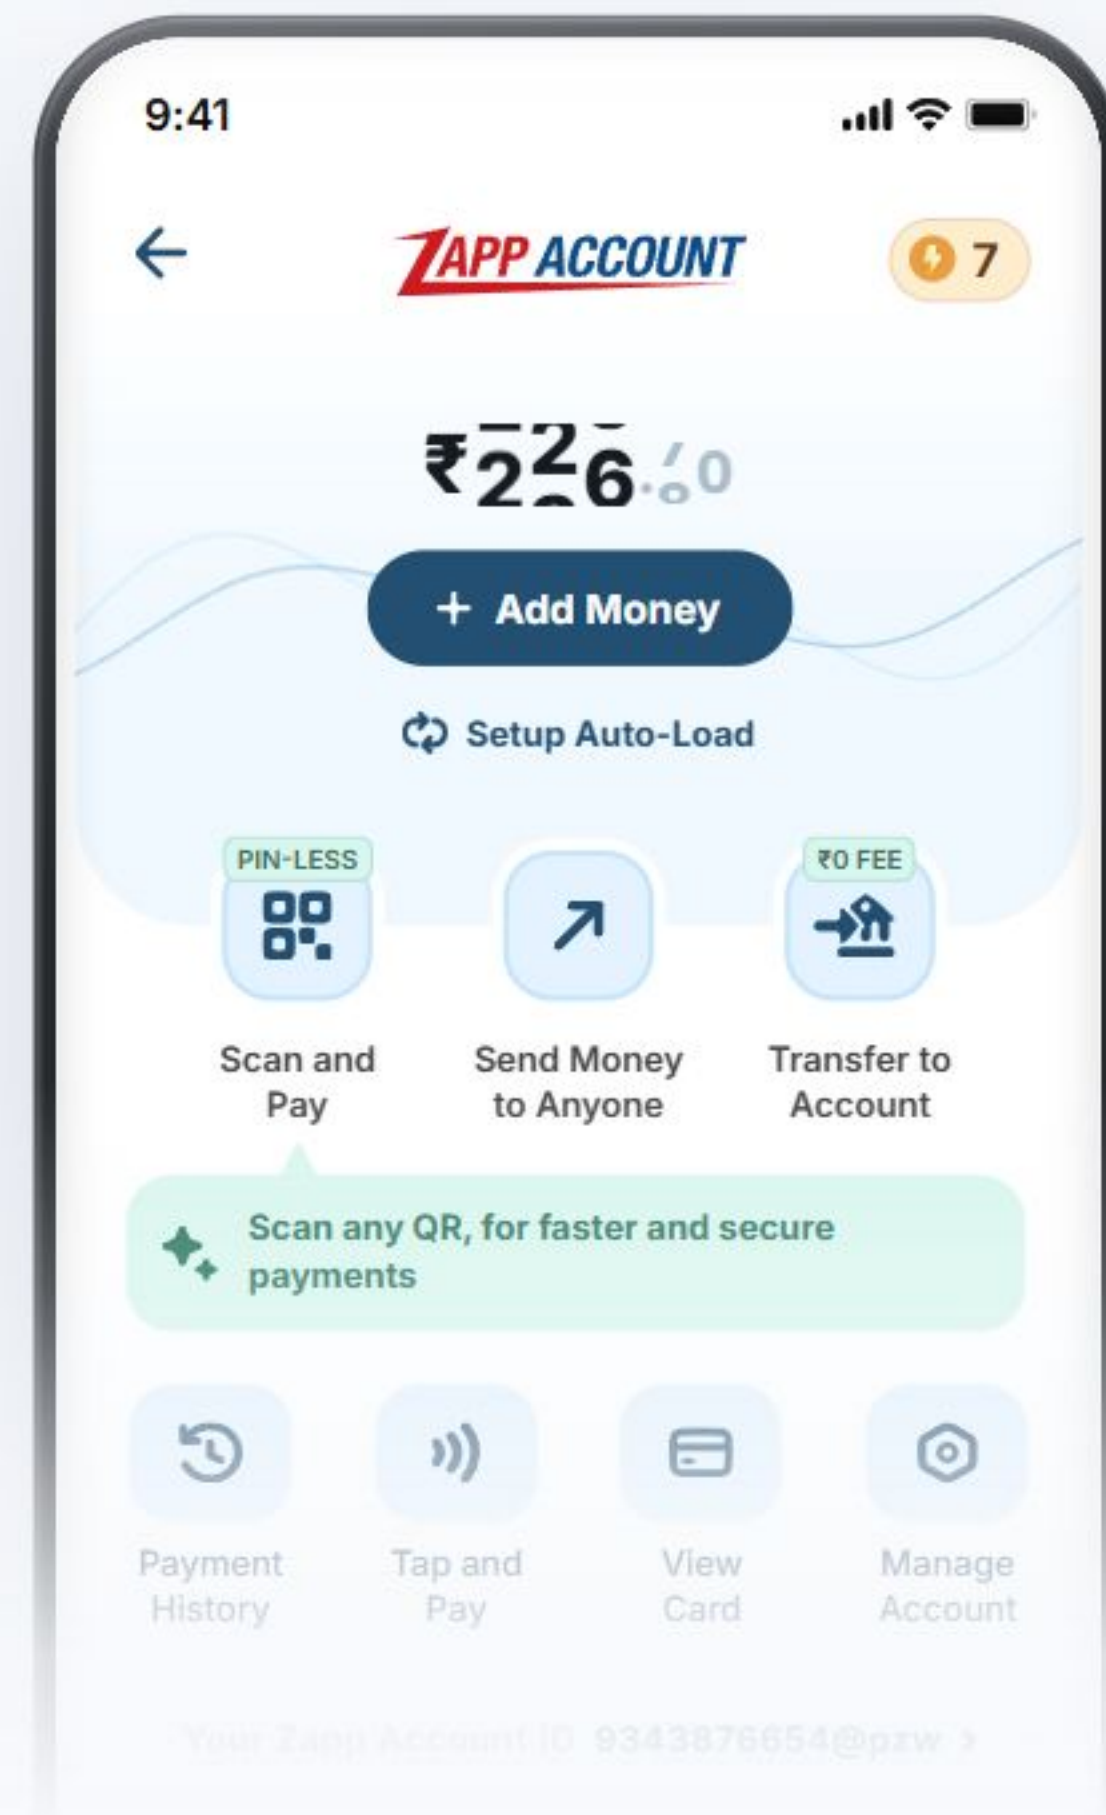

Cashpoints reinforced an existing behavior

We kept redemption visible and tied directly to the balance because many users already treated the wallet as a Cashpoints conversion tool.

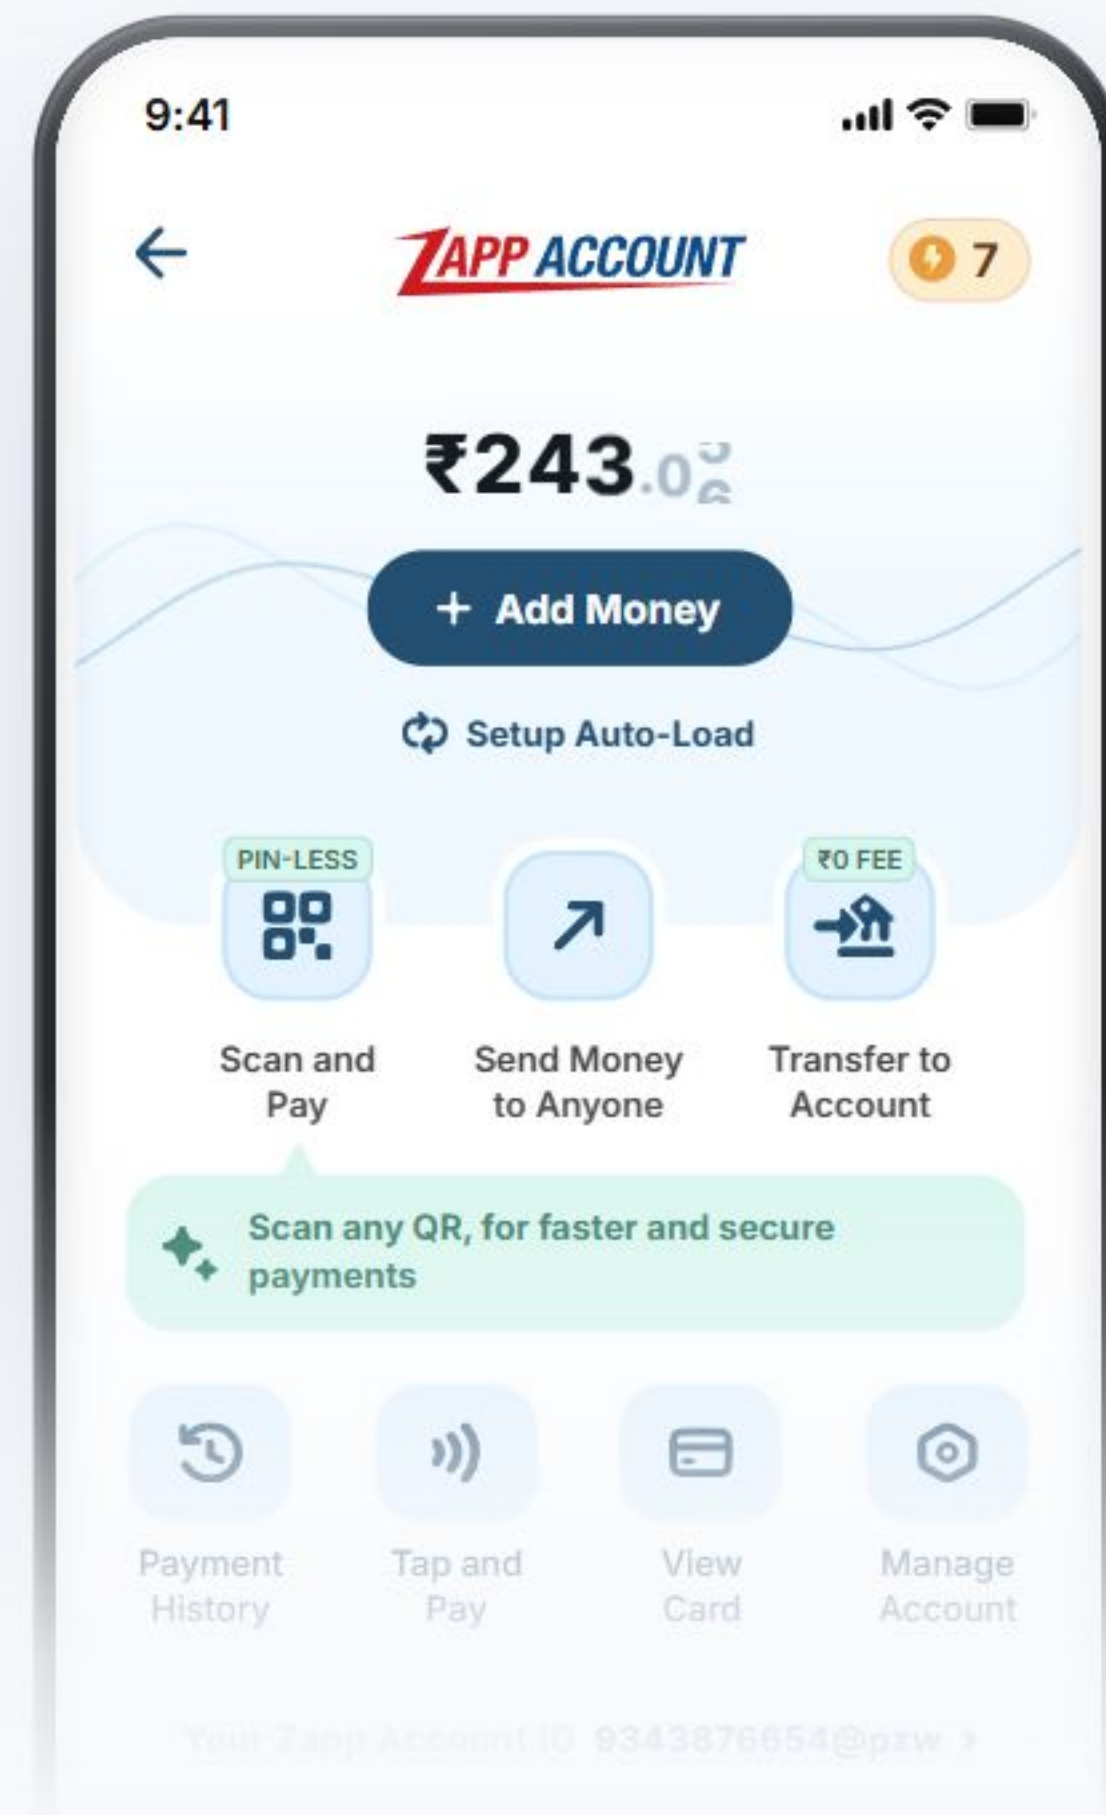

Balance became the hero

It was the first thing users came to check, so it led the page hierarchy.

Add Money became the hero CTA

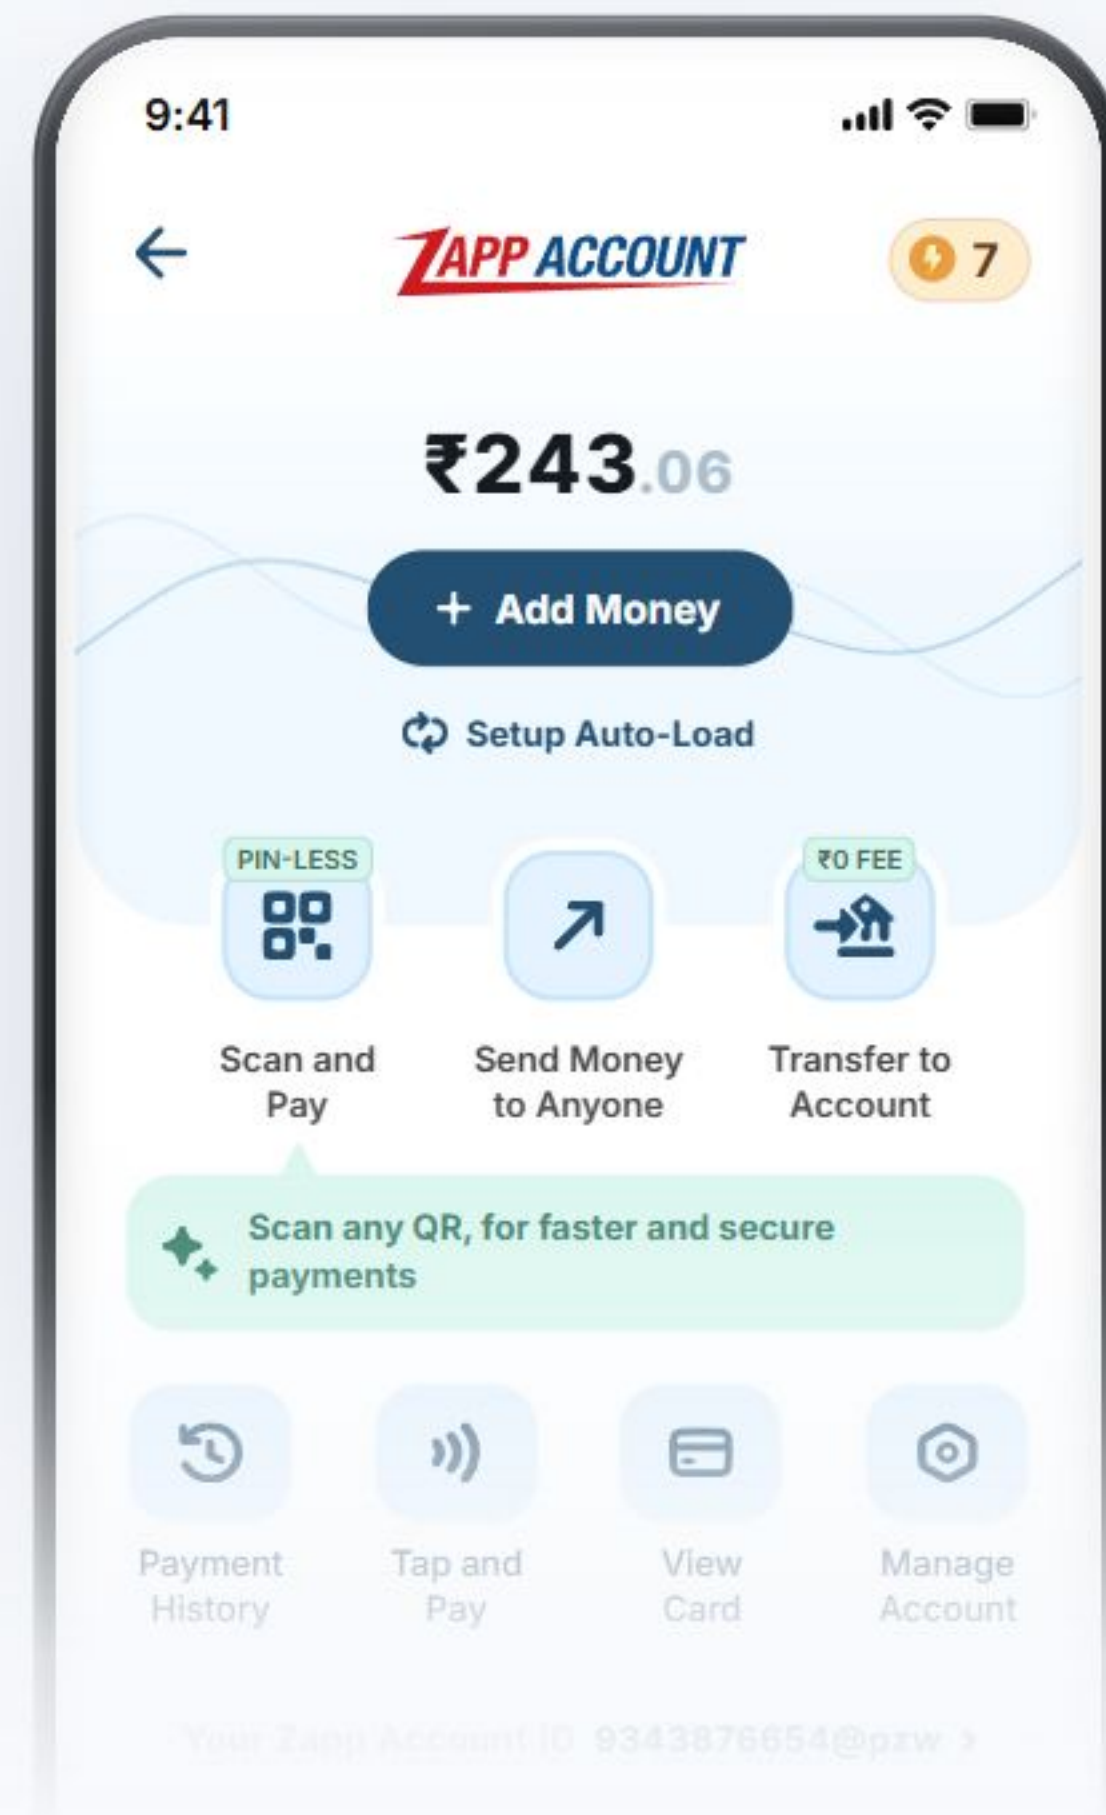

Competitor patterns validated the action. Negative space and subtle motion kept it visually dominant.

Add Money became the hero CTA

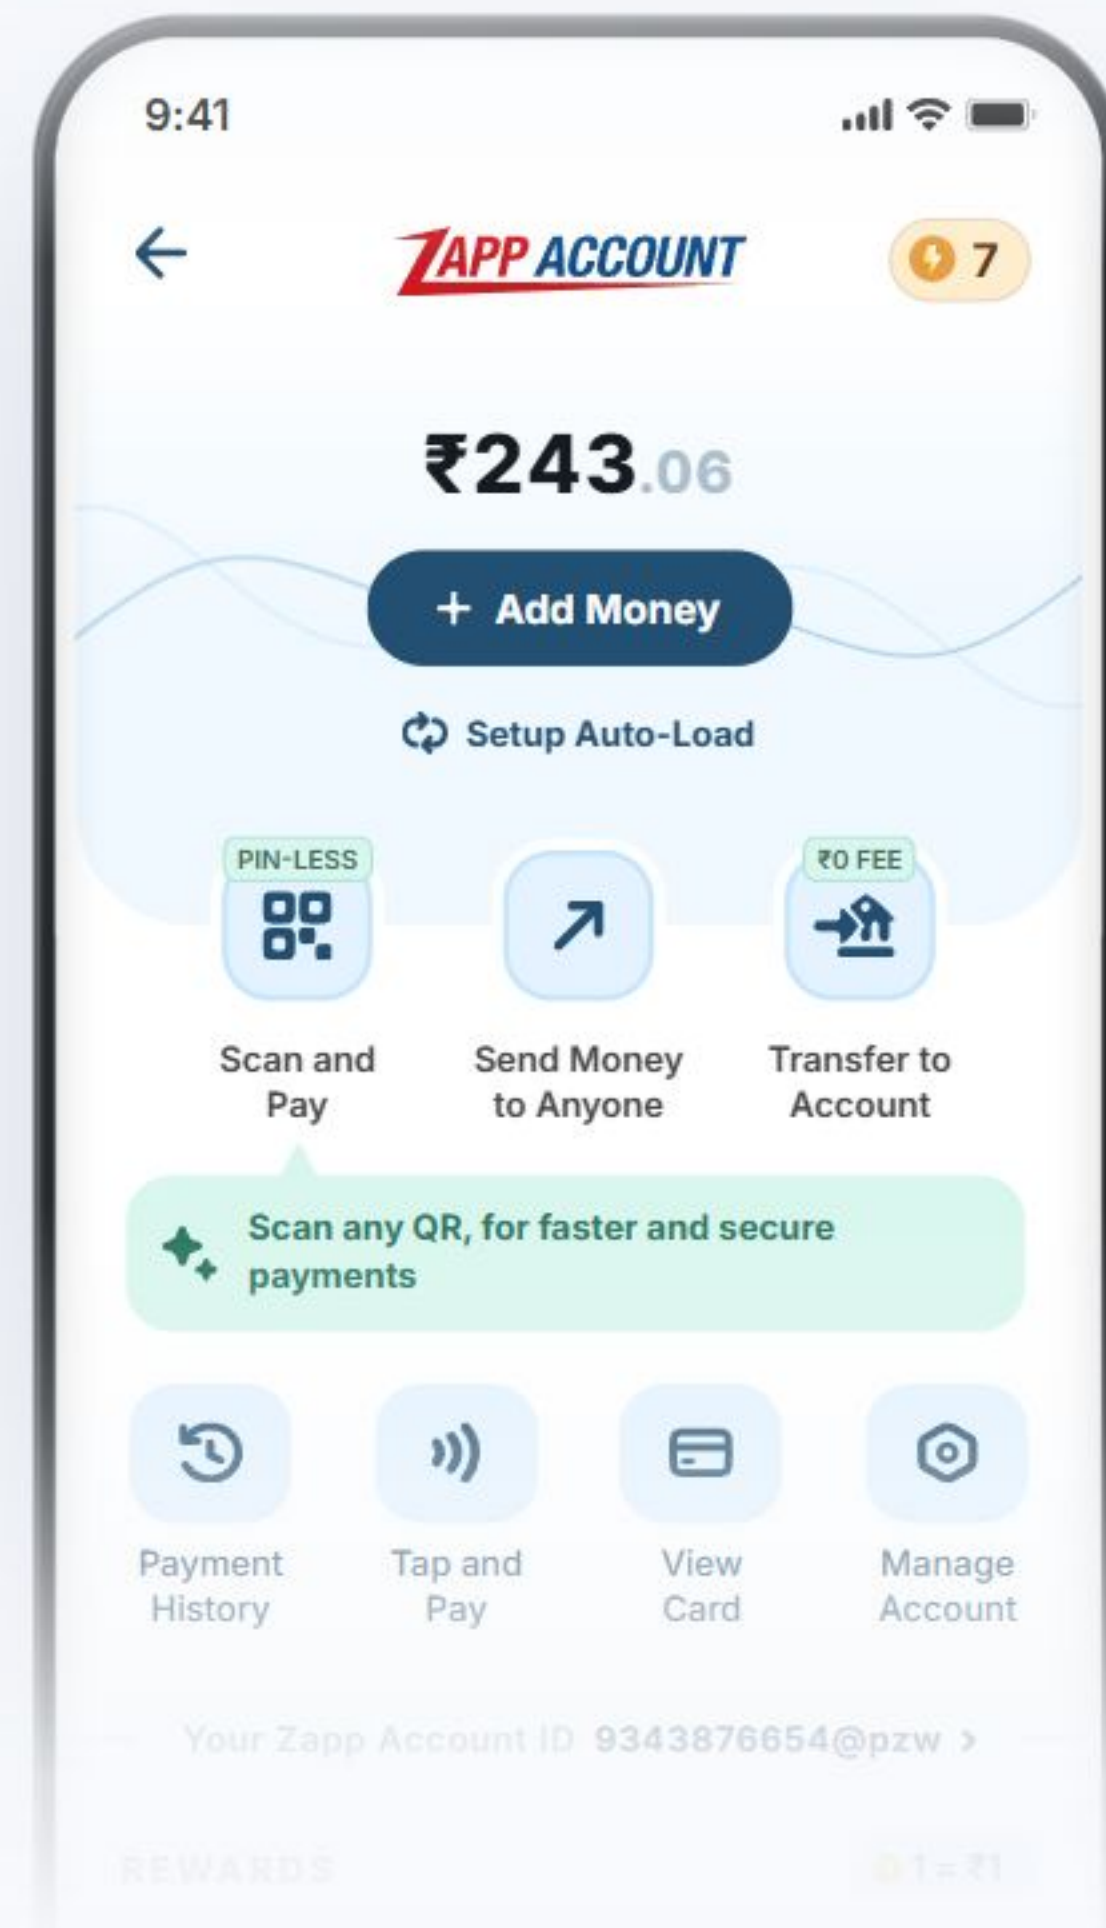

Competitor patterns validated the action. Negative space and subtle motion kept it visually dominant.

~1.5x Monthly loads

Context made Auto-Load discoverable

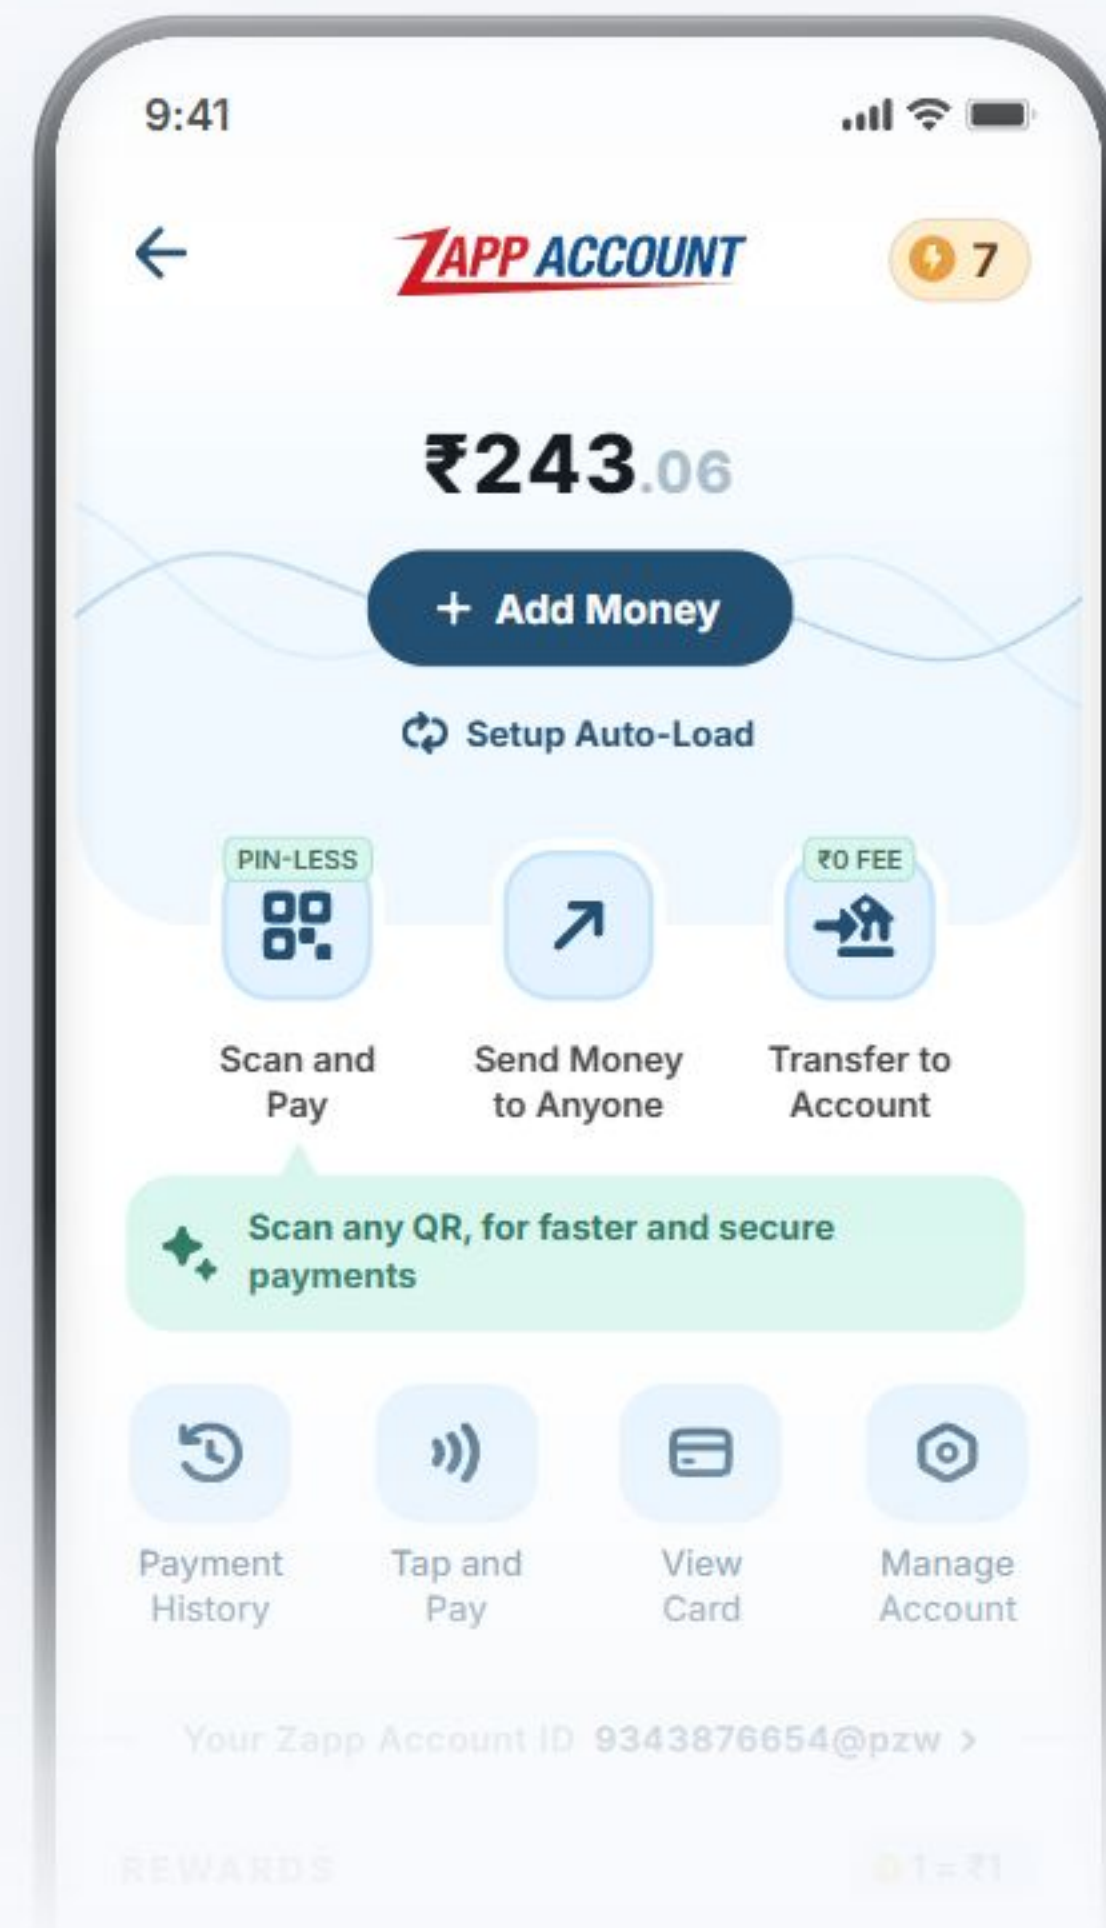

Placed directly beneath Add Money, it borrowed visibility from the same loading intent.

Context made Auto-Load discoverable

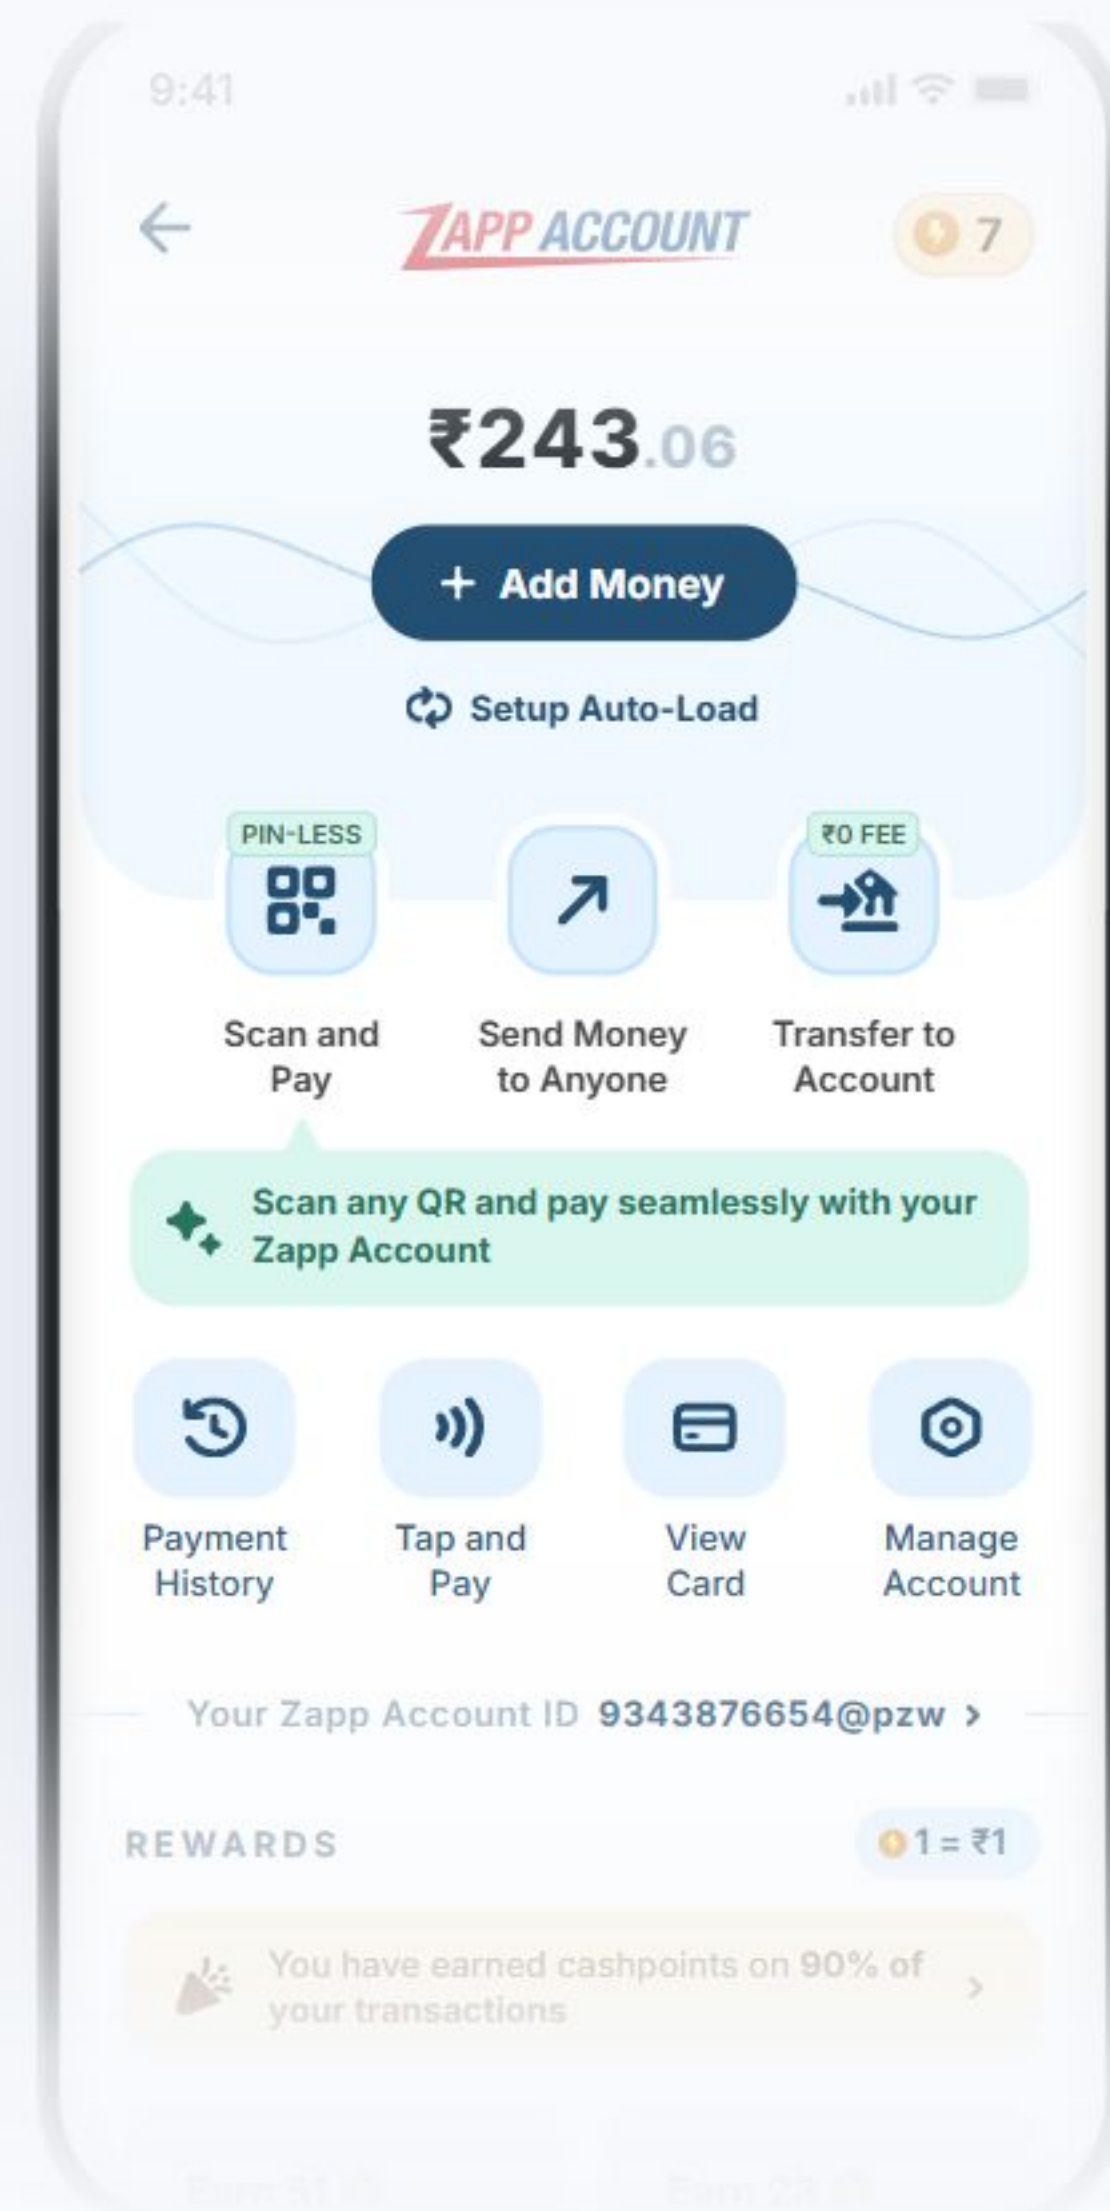

Placed directly beneath Add Money, it borrowed visibility from the same loading intent.

20% Auto-Load adoption

Soft nudges reinforced value in context

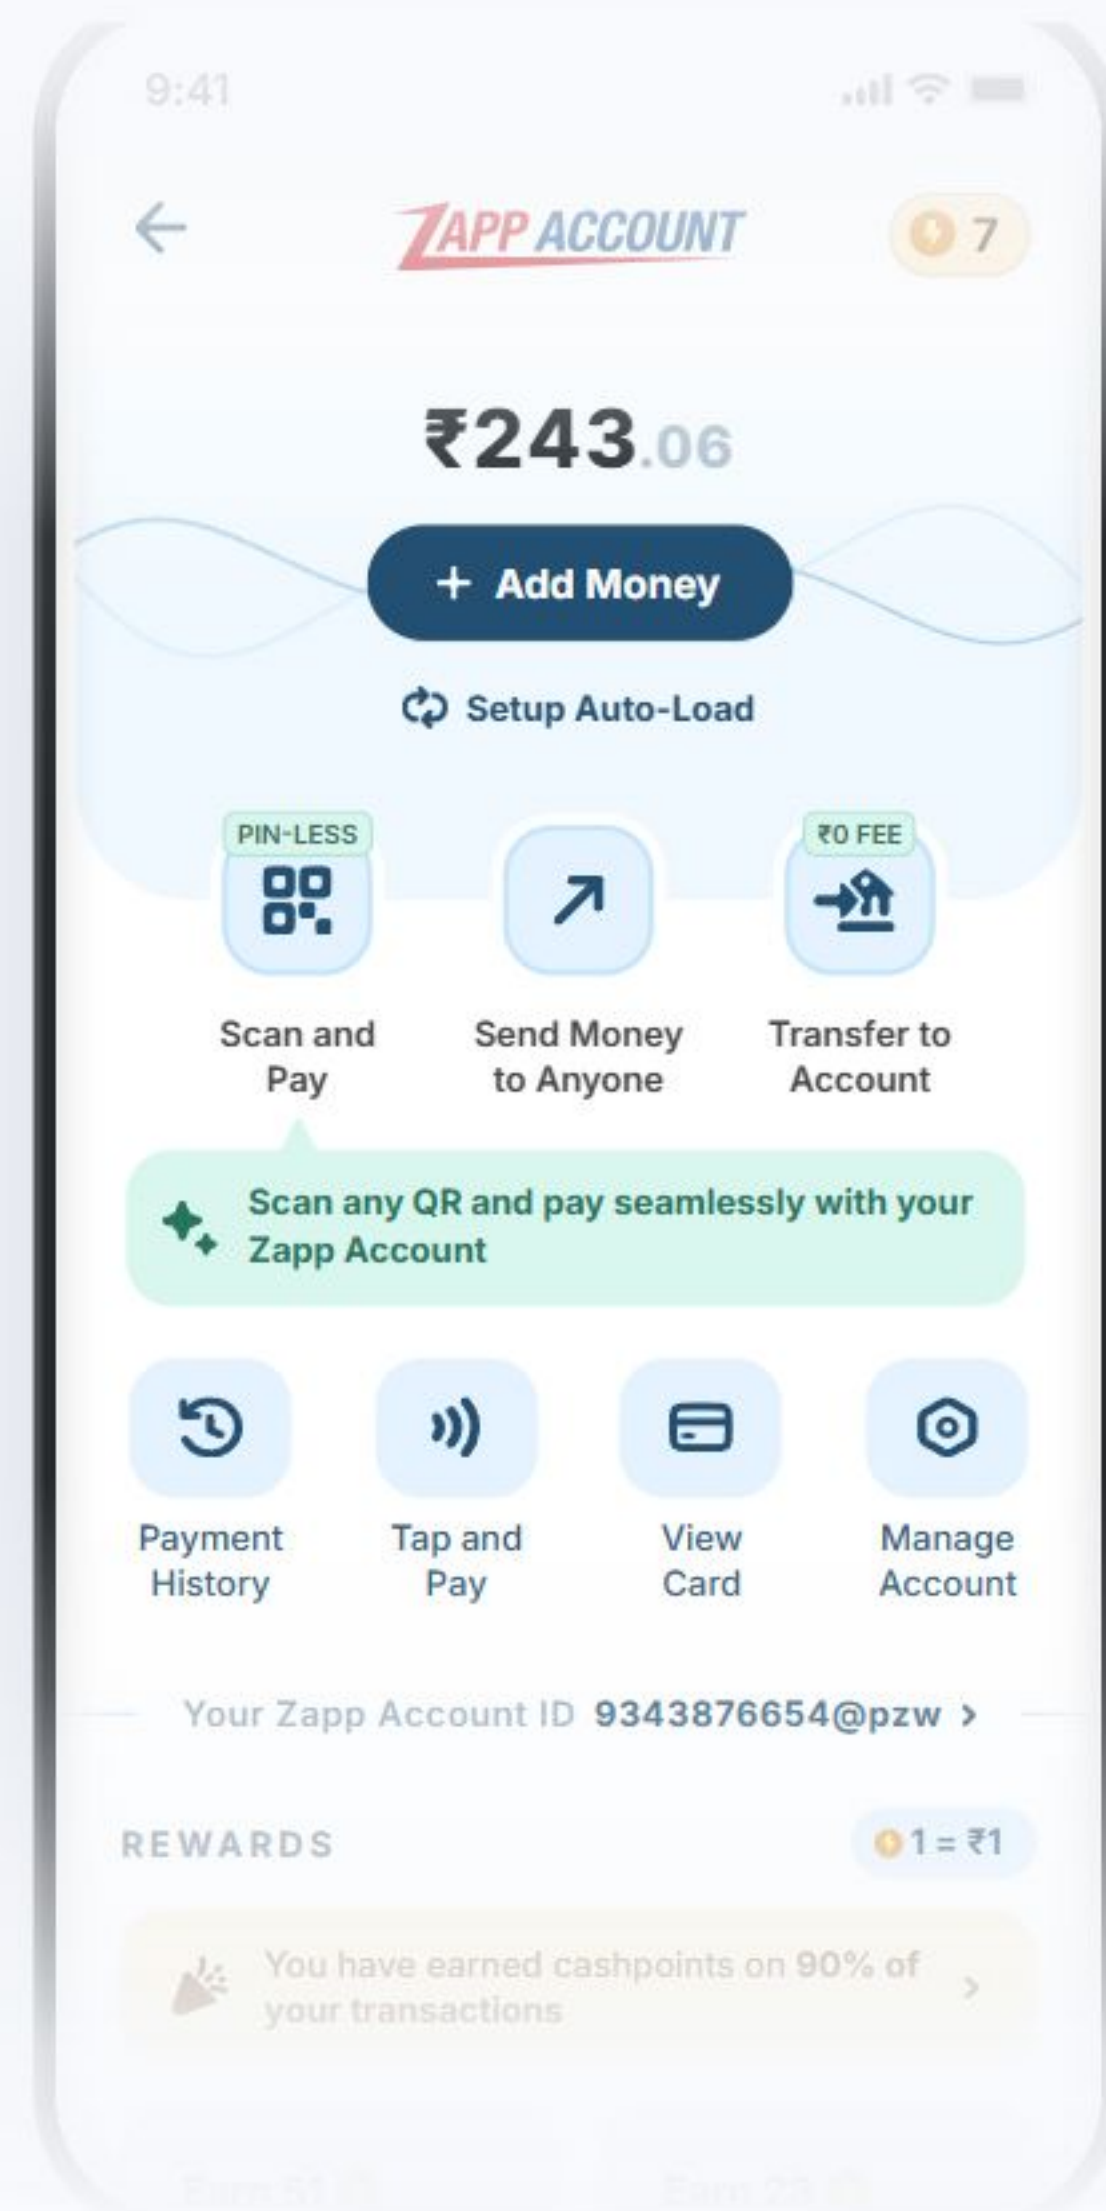

Behavior-led messages pointed to relevant actions and adapted to the user's lifecycle state.

Soft nudges reinforced value in context

Top 5

Digital wallet ranking

As reported

Zapp Account entered the Top 5 digital wallets.

AS OF JULY 2025

Top digital wallets by monthly spends

#1	FamPay		₹800 Cr
#2	PhonePe		₹800 Cr
#3	MobiKwik		₹500 Cr
#4	Amazon Pay		₹500 Cr
#5	Zapp Account		₹150 Cr

AS OF FEBRUARY 2026

~₹500 Cr

Monthly spends

~₹600 Cr

Monthly loads

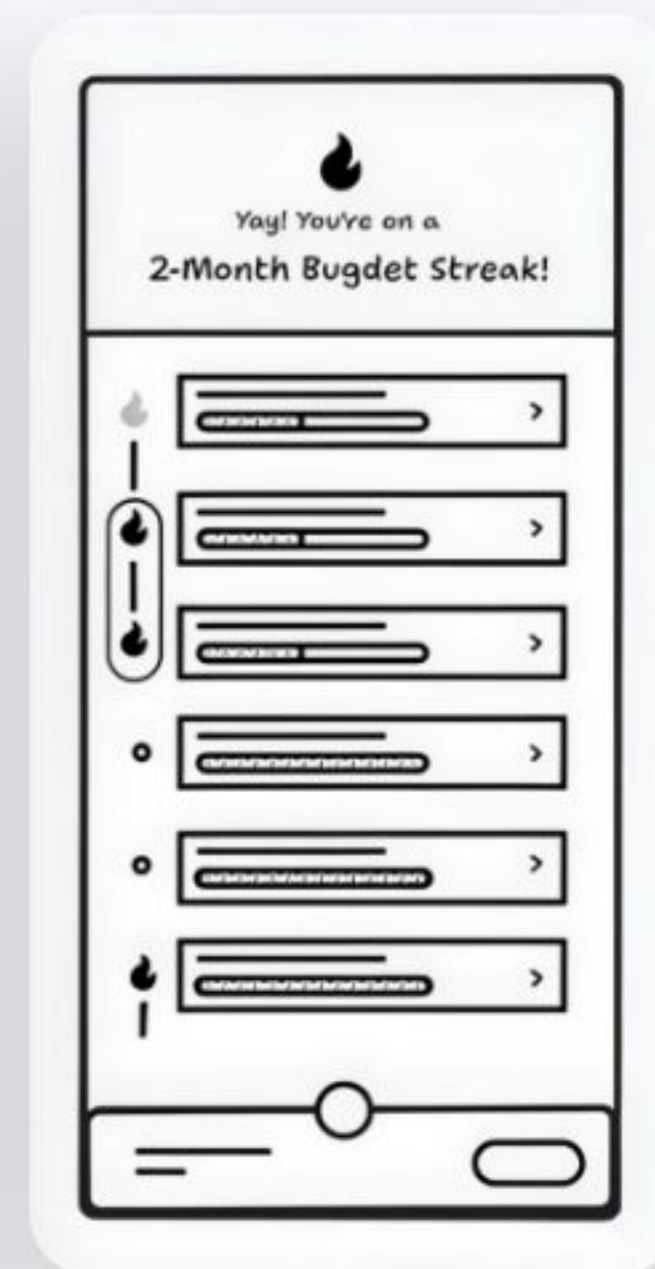

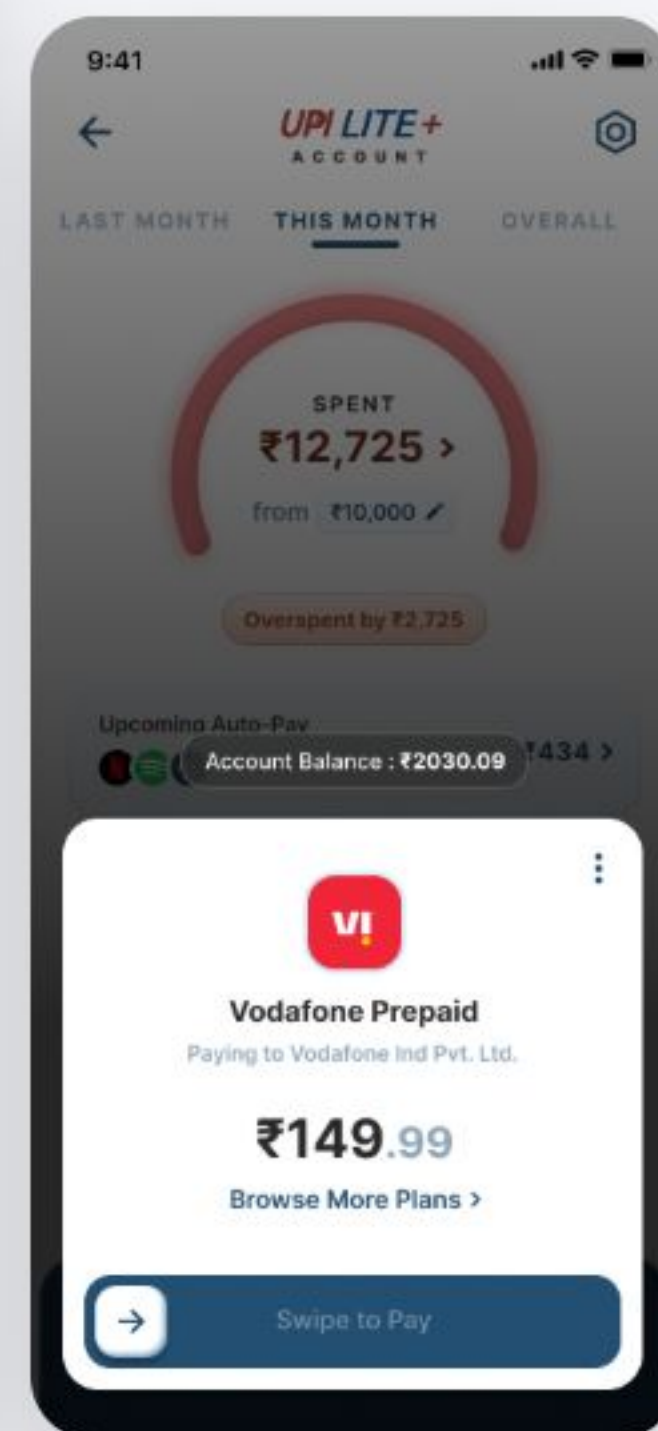

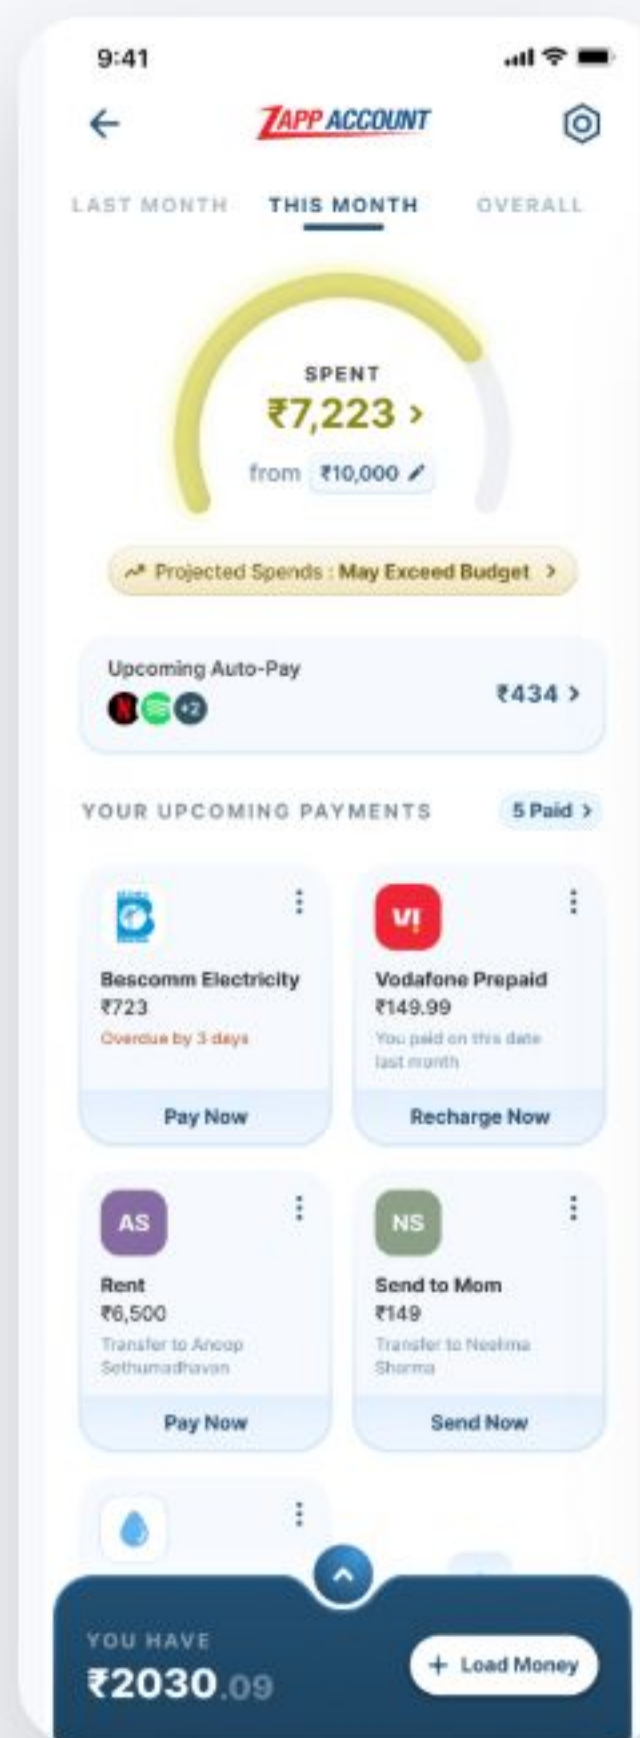

WHAT'S NEXT?

The bank has plans to externalise Zapp Account.

Apart from PayZapp, it will also be available as a standalone product across various banking digital touch points for HDFC. Target go-live: October–November.

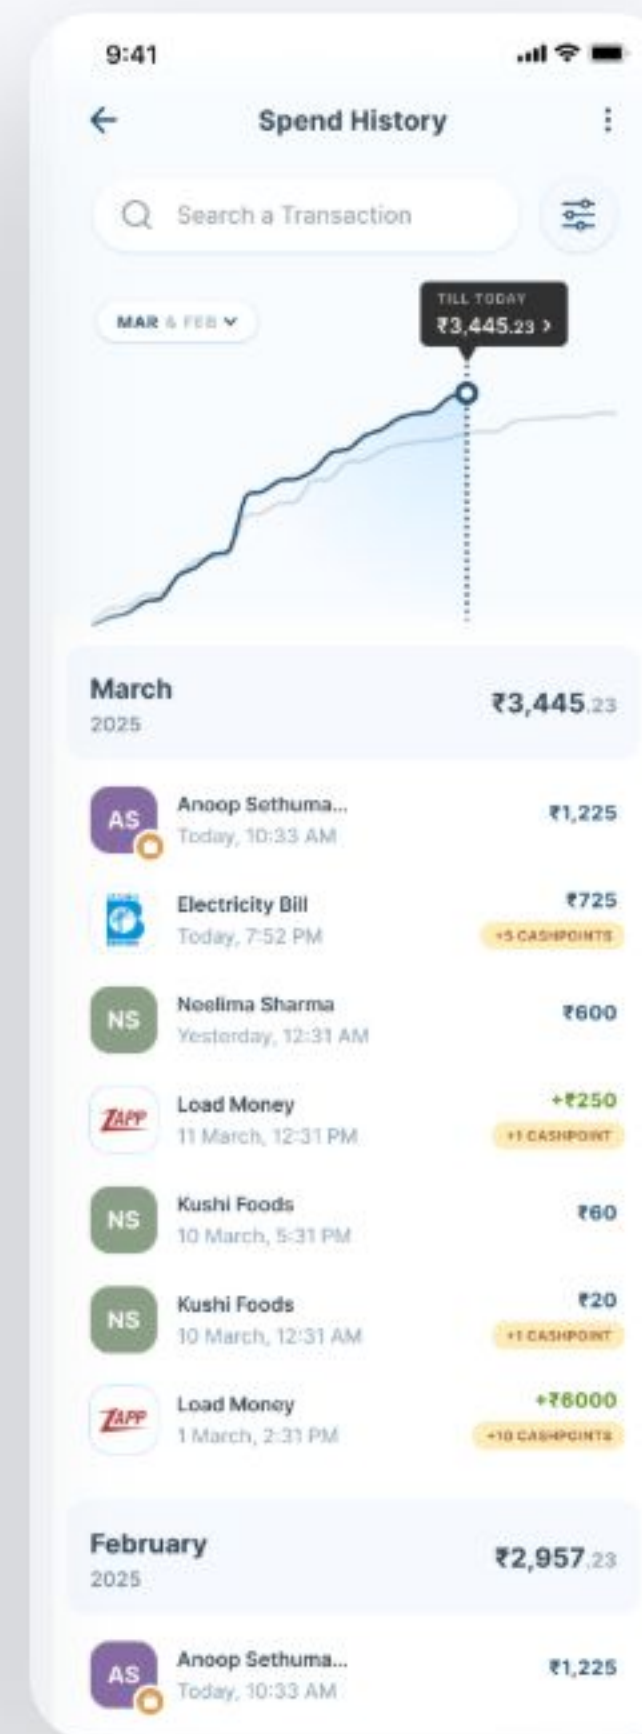

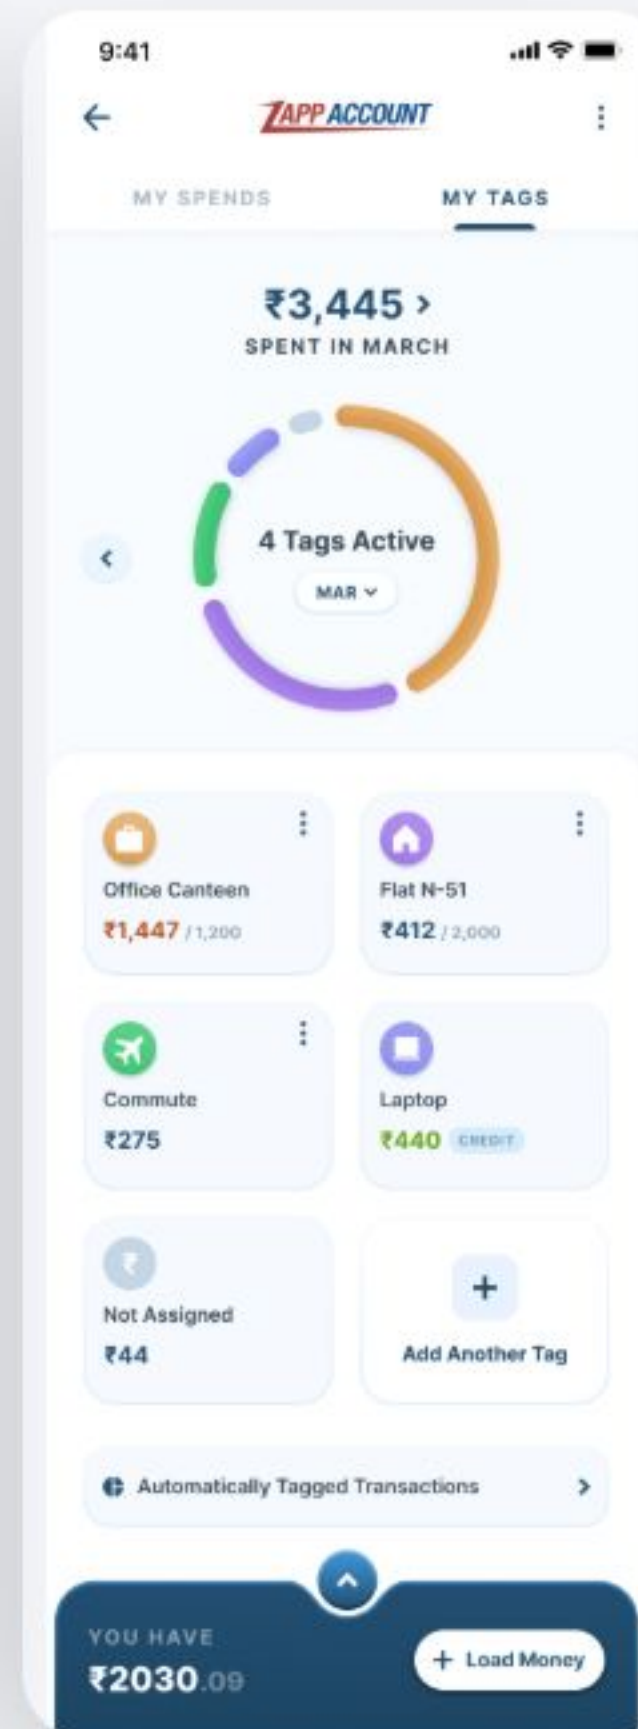

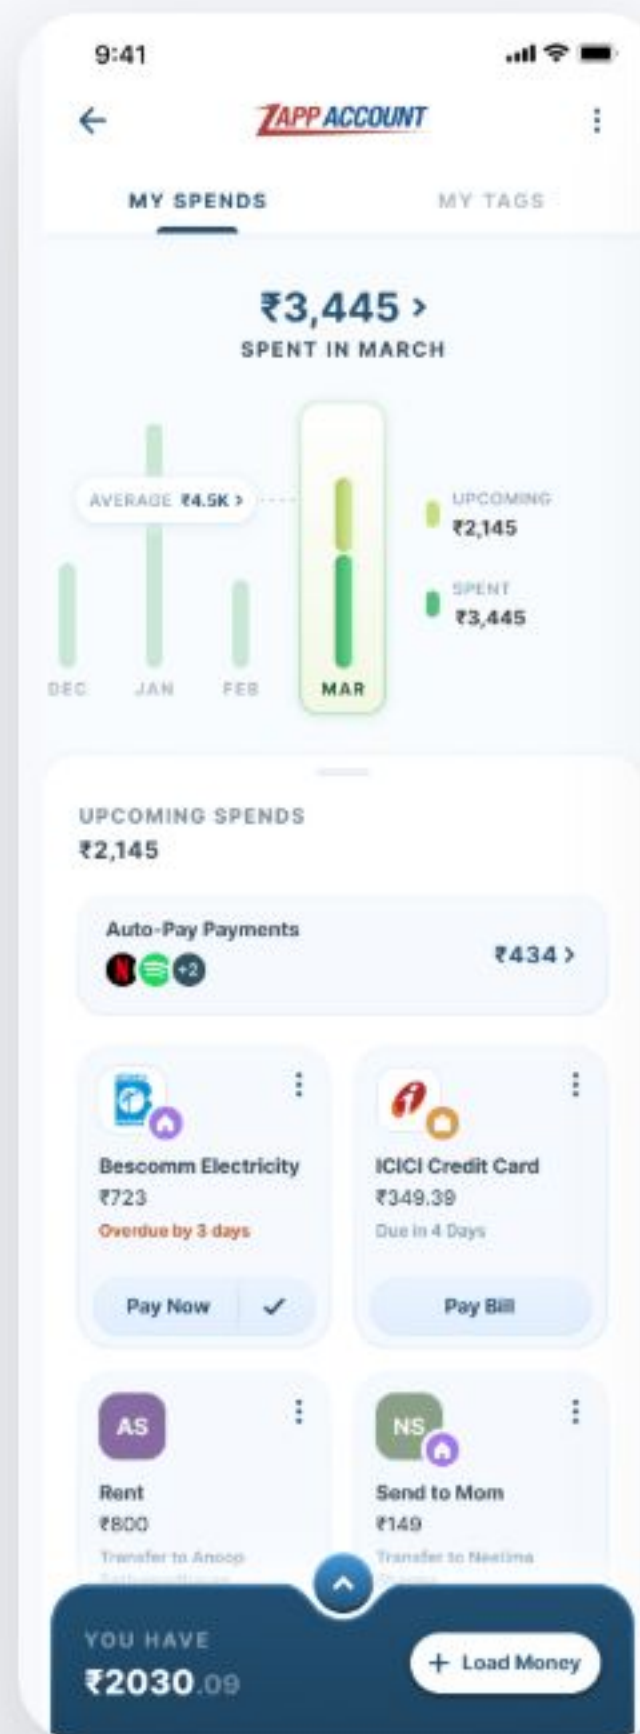

I explored a monthly budget

A self-set budget made monthly spending visible against a simple progress meter.

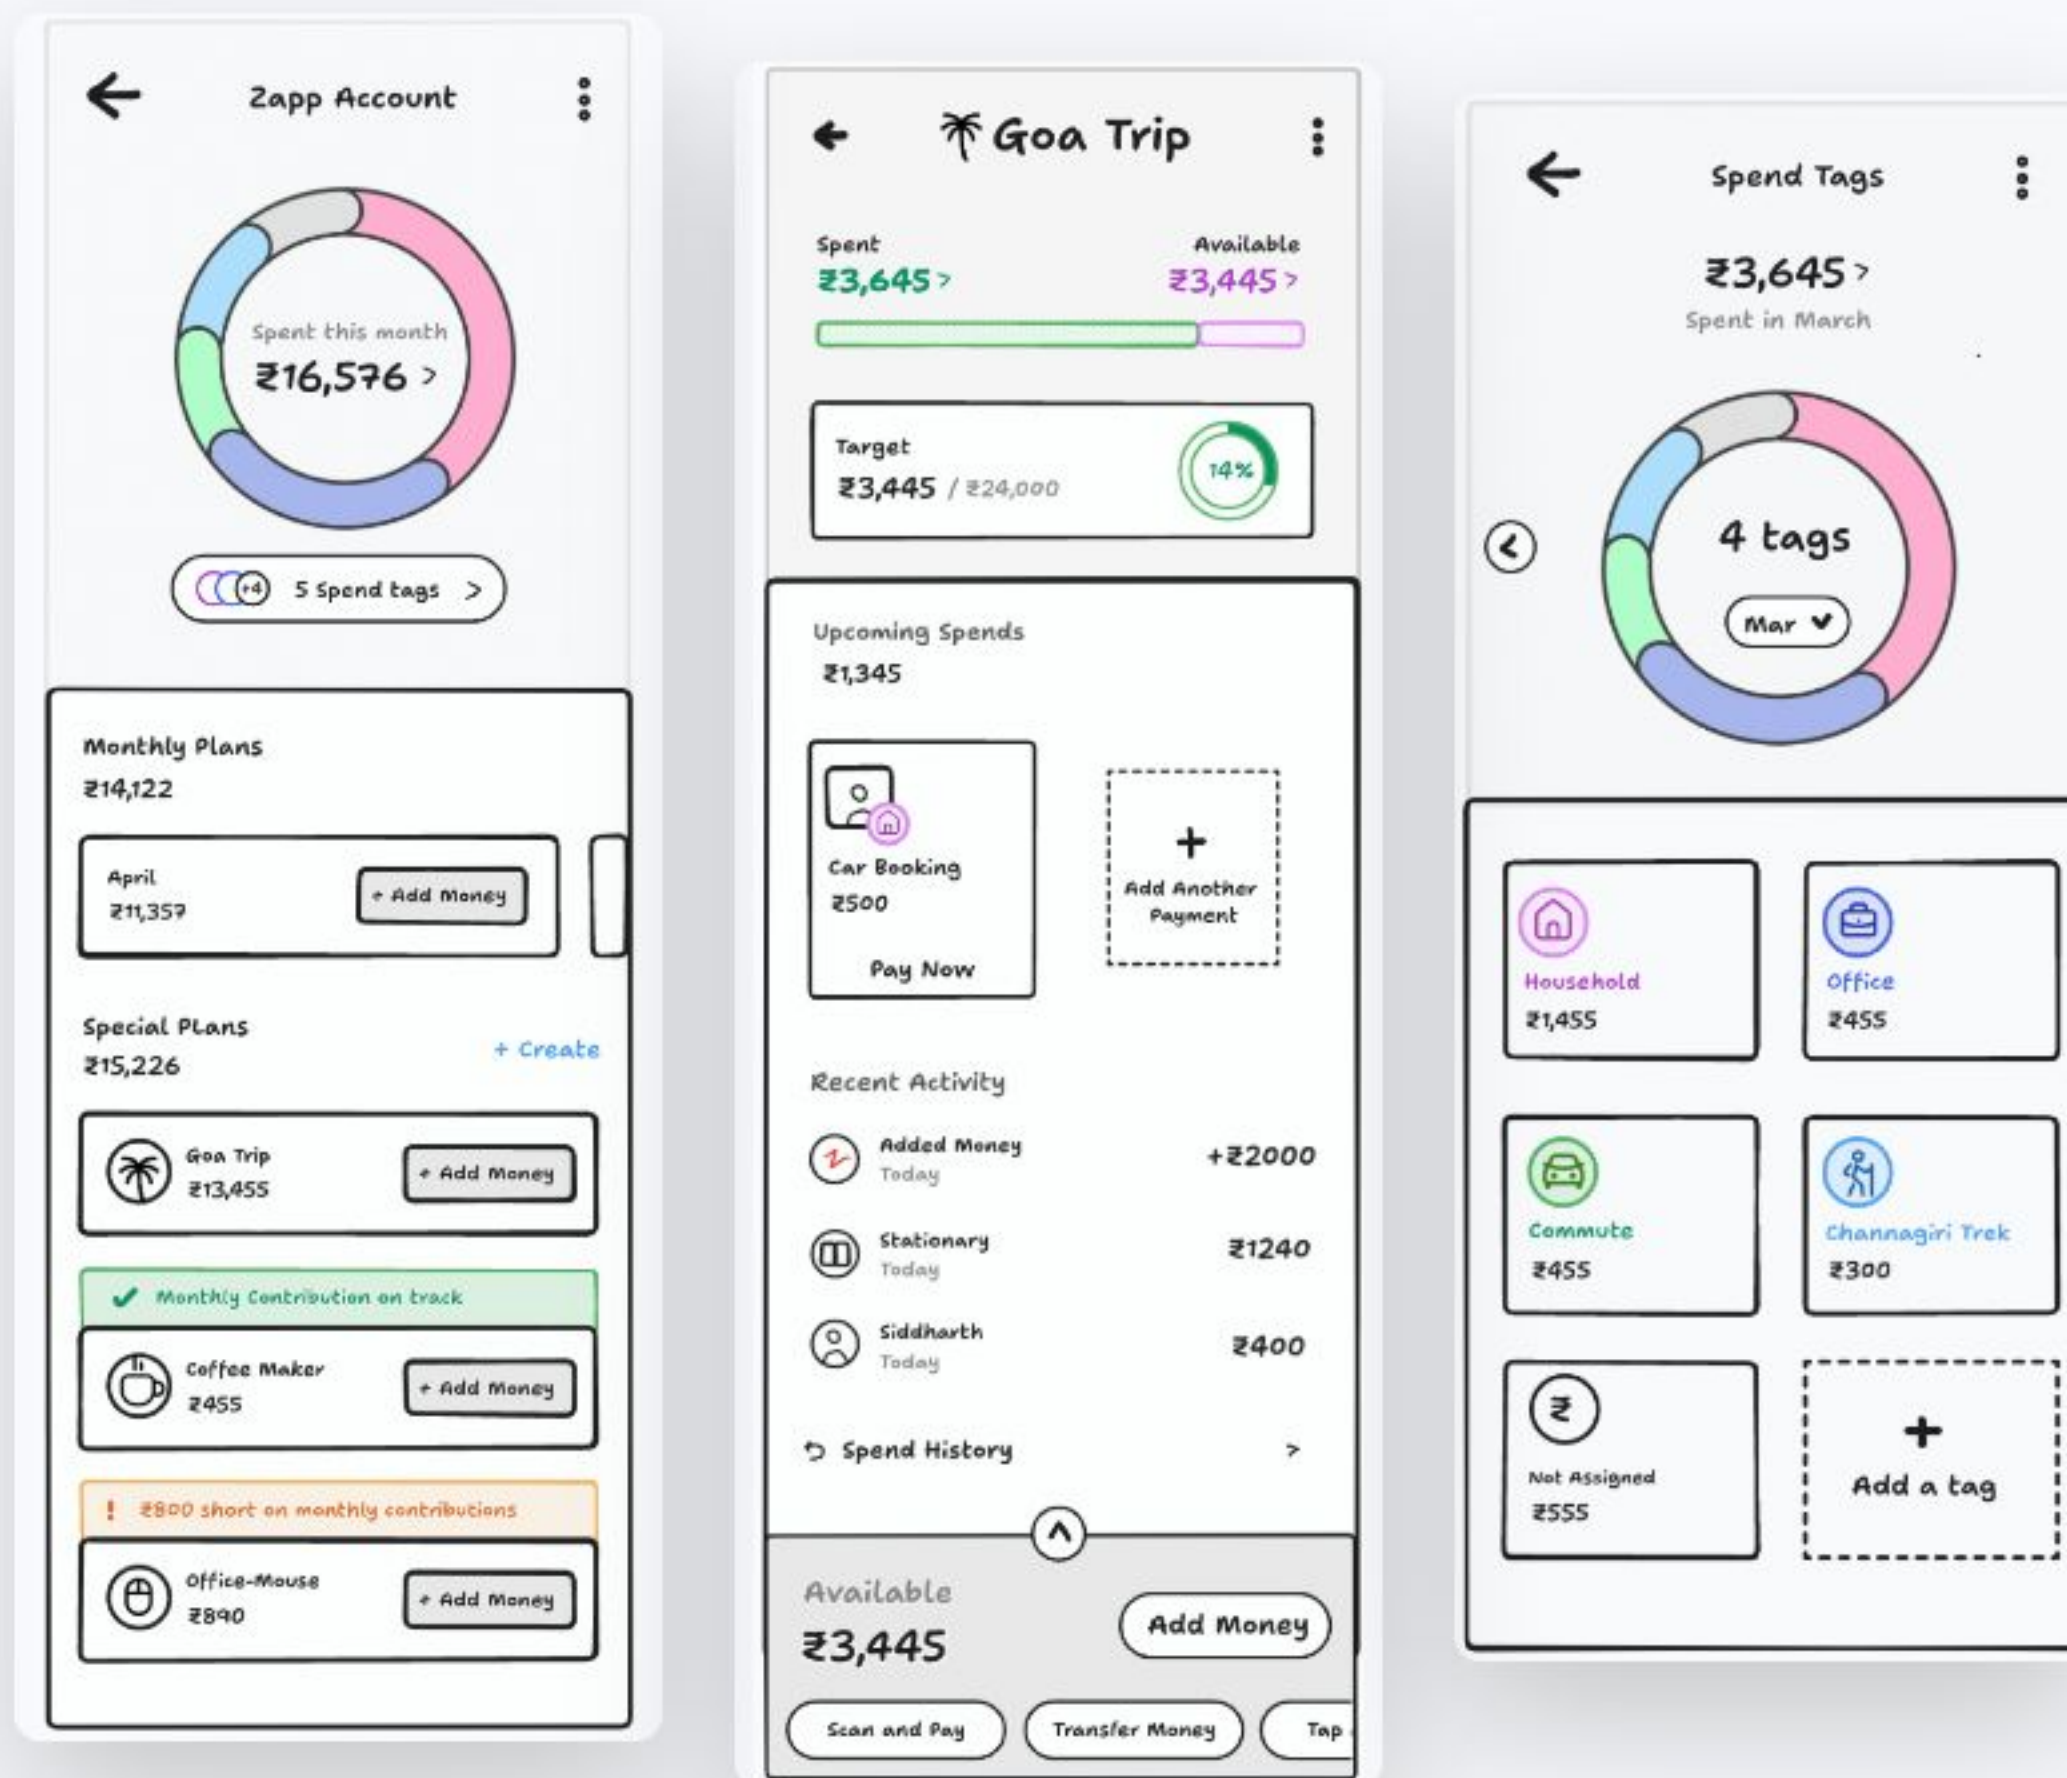

I explored spend insights

Monthly patterns, upcoming spends, and category cues could make the account useful beyond transactions.

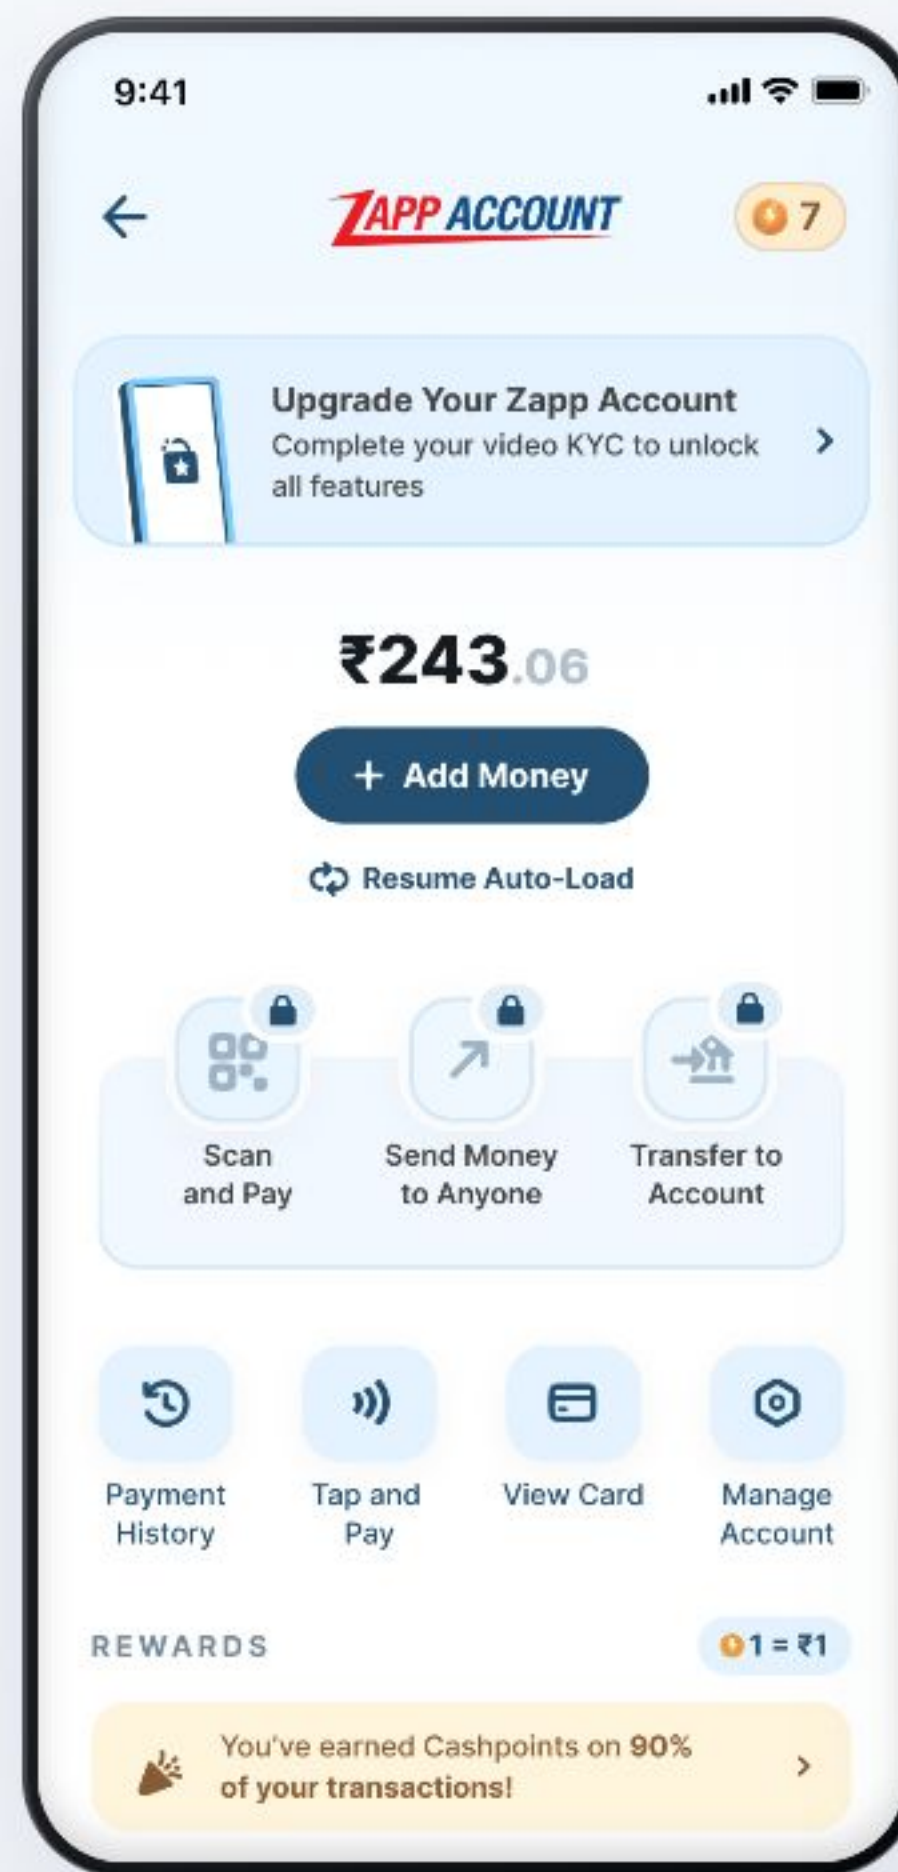

I explored spending buckets

Dedicated monthly and goal-based pockets could help people reserve money before spending it.
